

## PowerBroker<sup>®</sup> Directory Integrator

BeyondTrust is the global leader in privilege authorization management, access control and security solutions for virtualization and cloud computing environments.

BeyondTrust empowers IT governance to strengthen security, improve productivity, drive compliance and reduce expense. The company's products eliminate the risk of intentional, accidental and indirect misuse of privileges on desktops and servers in heterogeneous IT systems.

### Security, Compliance and Productivity with PowerBroker<sup>®</sup> Directory Integrator

In a secure and compliant environment, organizations will have a single centralized systems administration solution that reduces administrative overhead and training costs, while strengthening corporate security policies, increasing productivity, and simplifying compliance reporting requirements. Organizations can no longer tolerate the security risks posed by intentional, accidental or indirect misuse of privileges across multiple platforms such as UNIX and Windows.

PowerBroker<sup>®</sup> Directory Integrator removes the security risks with users who commonly write various platform access details on notepaper easily available for anyone to read. Additionally, PowerBroker Directory Integrator provides administrators with a single point of management, saving significant amounts of time previously used to create custom scripts to manage user access for each service.

### Key Benefits

- Creates Active Directory Bridge where users can log in once with their credentials to access multiple applications on different Unix/Linux and Windows platforms
- Reduces help desk calls relating to lost or misplaced passwords
- Foreign domain support to ensure broad environment coverage for identity bridging
- Deploys in minutes without creating irreversible changes to Active Directory
- Ensures all activities performed on Unix/Linux are written to the proper Active Directory logs, resulting in reduced audit costs and rapid discovery of risk

*"Does your working day start with logging into your Unix workstation? Then your Windows email with another user ID and password, and then another application, another .... Isn't there a better way? Yes, AD Bridge."*

Wolfgang Gentzsch  
DEISA Advisor

#### Regulatory Compliance

Centralization combined with the logging and auditing of users and systems needed to run consistently, will impress auditors trying to boost compliance efforts. PowerBroker<sup>®</sup> Directory Integrator provides an integrated authentication and configuration solution that extends Microsoft<sup>®</sup> Active Directory's privileged identity management to UNIX and Linux systems.

#### About BeyondTrust

BeyondTrust is a proven leader with more than 25 years of experience. More than half of the companies listed on the Dow Jones, eight of the 10 largest banks, seven of the 10 largest aerospace and defense firms, and six of the 10 largest U.S. pharmaceutical companies rely on BeyondTrust to secure their enterprise.

*"BeyondTrust does a great job streamlining a lot of underlying complexity and will get you rapidly standardized on Active Directory."*

Peter Giannacopoulos  
Information Security Magazine

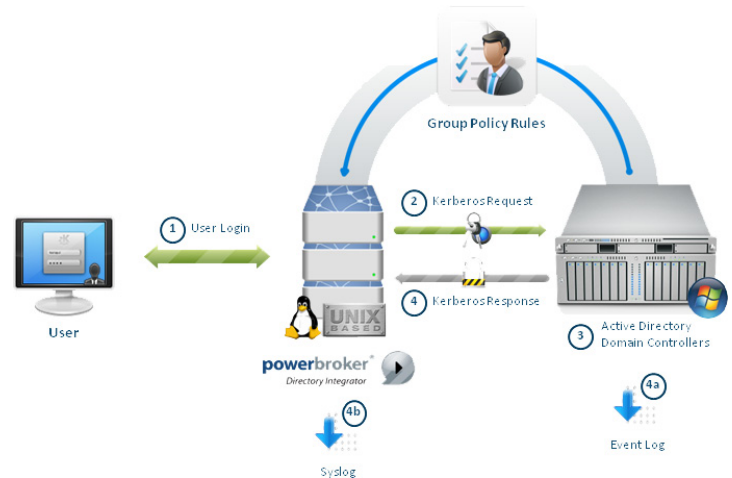

## Bridge UNIX<sup>®</sup> and Linux<sup>®</sup> Systems to Active Directory with Certainty and Clarity

PowerBroker<sup>®</sup> Directory Integrator provides integrated authentication and configuration that extends Active Directory's centralized authentication, authorization, account access, policy enforcement and infrastructure management to UNIX and Linux platforms.

With PowerBroker Directory Integrator, organizations have a single centralized systems administration solution that reduces administrative overhead and training costs, while helping strengthen corporate security policies, increasing productivity, and simplifying compliance reporting.

PowerBroker Directory Integrator creates an AD Bridge where users can log in once with their credentials to access the resources of multiple software systems.

## How PowerBroker<sup>®</sup> Directory Integrator Works

## Eliminate Intentional, Accidental and Indirect Misuse of Privileges

PowerBroker<sup>®</sup> Directory Integrator eliminates the need to establish separate access credentials for disparate systems, and allows administrators to create configuration settings that are automatically stored in Active Directory. PowerBroker Directory Integrator reduces IT costs for maintaining and managing multiple identity stores by consolidating them into a single identity store - Active Directory.

## PowerBroker<sup>®</sup> Directory Integrator Makes Active Directory Integration Simple

### Security

- Supports GSSAPI/Kerberos-based transparent sign on
- Controls access by user, host, group or protocol
- Terminates access to Windows, Unix and Linux when disabling or deleting users in Active Directory
- Allows for more rapid discovery of potential security anomalies
- Simplifies importing and mapping of current Unix/Linux user information directly into AD

### Compliance

- Ensures that all activities performed on Unix/Linux systems are written to the proper Active Directory logs
- Audit-ready reporting
- Illustrates accountability and enforcement of access controls listed in mandates such as SOX, HIPAA, GLBA, PCI DSS, FDCC, and FISMA
- Reduces overall audit costs
- Foreign domain support to ensure broad environment coverage

### Productivity

- Reduces help desk calls relating to lost or misplaced passwords
- Does not require Professional Services to deploy
- Non-intrusive and requires no reboots during install
- Centralized management for greater control and compliance
- Deploys in minutes without creating irreversible changes to the Active Directory schema

## Supported Platforms

Please visit <http://www.beyondtrust.com/products/PBDI-README.TXT> for a complete list of supported UNIX/Linux/Windows platforms.
