Identity Security Insights 24.01

What's New Documentation

Release Date – January 11, 2024

BeyondTrust Identity Security Insights is a powerful solution that helps you protect your organization from identity-driven threats. It leverages machine learning to automatically correlate and contextualize your identity data across on-premises and multicloud environments. This enables you to gain a holistic understanding of your unique identity security posture, and helps you to identify, detect, and respond to threats quickly and effectively.

With Identity Security Insights, your teams have a single source of truth to:

- Identify your greatest identity-driven risks
- Gain proactive recommendations specifically curated for your unique environment
- Detect threats such as lateral movement and privilege escalation

Release Highlights

For Password Safe customers, extended on-premises Password Safe support enables complete enterprise visibility across on-premises and cloud.

With Identity Security Insights now supporting BeyondTrust on-prem Password Safe, all Password Safe customers, on-premises and cloud, can leverage Identity Security Insights to gain complete visibility into passwords, accounts, secrets, and sessions across their enterprise.

The enhanced "Insights Collector" effortlessly handles both Microsoft Active Directory and on-premises Password Safe, replacing the previous Microsoft Active Directory Connector. Existing and configured Microsoft Active Directory connectors will automatically update, and you can re-run the installer for Identity Security Insights to gather additional on-premises Password Safe data. Simply secure your install key, download the enhanced on-premises agent, and configure the Insights Connector to seamlessly collect data from either or both sources.

Less noise, more focus and time savings with rule-based exclusions.

Say goodbye to individual updates for detections and recommendations. Now you can define rules or criteria to automatically filter out unwanted detections and recommendations from your dashboards and reports, for a more focused and relevant view. Once you create a rule, all existing and future instances that match the criteria of the rule will be excluded (not deleted), helping you keep your view clean and prioritized. Exclusion rules currently filter based on a known detection, recommendation, or account, identity, or entity. Expect greater flexibility with additional rule types in upcoming releases.

Streamlined entitlements make it easier to manage all roles and permissions.

Now you can view entitlements with roles and permissions indicated as types of entitlements for clearer visibility and more informed decisions.
