

BeyondTrust BeyondInsight 21.2

Feature Release – July 27, 2021

BeyondInsight is BeyondTrust's platform for centralized management, reporting, and threat analytics for Privilege Access Management (PAM). It delivers unmatched visibility and control over privileged access activity, simplifies deployment, automates tasks, improves security, and reduces privilege-related risks.

See the release notes for details.

New Feature Highlights

Advanced Purge Options – New options for periodic maintenance

Previously, customers were limited to scheduling maintenance on a nightly schedule only. Less-frequent scheduling options for maintenance were not available.

With this release, customers can select the frequency of maintenance from nightly to weekly and gain a more granular approach for controlling the maximum time allowed for the maintenance to execute. These new options provide customization and flexibility to help customers better meet their business needs.

Discovery Scans – Expansion of custom port support for MySQL, MS SQL, and SSH Credentials

BeyondInsight 21.2 adds additional flexibility when discovering databases such as MySQL or Microsoft SQL, or when scanning systems using SSH. It now provides the option for the user to define the port the discovery agent uses to authenticate to these platforms. This change ensures that even systems configured to use custom ports can be properly assessed.

IBM QRadar Connector - Support for unique event type ID

BeyondInsight 21.2 includes an updated version of the LEEF formatter used by the IBM QRadar connector. The updated version uses a unique ID per event type when sending events to QRadar. This new format allows an IBM QRadar user to filter/alert based on event types, providing a more accurate picture of relevant events.

Discovery Agent Upgrade

BeyondTrust will release a new discovery agent for BeyondInsight in the coming weeks. As a BeyondInsight customer, you will need to migrate to this new discovery agent by the end of 2021.

A new notification will appear on screen to notify administrators when to log in to BeyondInsight and will prompt them to upgrade as soon as possible. Additional information will be forthcoming on this. To make this process as simple as possible to our customers, the upgrade will be available via auto-update. For air-gapped environments or environments not configured for auto-update, a discovery agent upgrade executable file will be made available for download from the customer portal. This single executable will automatically make the changes necessary in the solution.

About BeyondTrust

BeyondTrust is the worldwide leader in Privileged Access Management (PAM), empowering organizations to secure and manage their entire universe of privileges. Our integrated products and platform offer the industry's most advanced PAM solution, enabling organizations to quickly shrink their attack surface across traditional, cloud, and hybrid environments.

The BeyondTrust Universal Privilege Management approach secures and protects privileges across passwords, endpoints, and access, giving organizations the visibility and control they need to reduce risk, achieve compliance, and boost operational performance.

Our products enable the right level of privileges for just the time needed, creating a frictionless experience for users that enhances productivity.

With a heritage of innovation and a staunch commitment to customers, BeyondTrust solutions can easily deploy, manage, and scale as businesses evolve. We are trusted by 20,000 customers, including 70 percent of the Fortune 500, and a global partner network. Learn more at www.beyondtrust.com.
