

BeyondTrust BeyondInsight 21.3

Feature Release – December 2, 2021

BeyondInsight is BeyondTrust's platform for centralized management, reporting, and threat analytics for Privilege Access Management (PAM). It delivers unmatched visibility and control over privileged access activity, simplifies deployment, automates tasks, improves security, and reduces privilege-related risks.

See the release notes for details.

New Feature Highlights

Support for Additional Authentication Services: Azure Active Directory Integration

Organizations leveraging Azure Active Directory (AAD) can use it to control access to applications and resources, based on their business requirements.

With 21.3, BeyondInsight releases support for Azure AD integration for the purposes of user authentication into the BeyondInsight platform. With this enhancement customers can set up integration with AAD so that users can log in to BI with their AAD account, in the same way they can do today with on-premises Active Directory. This enhancement expands authentication options and provides customers with added flexibility.

Support for Additional Authentication Services: Time-based One-time Password

BeyondInsight now supports additional two-factor authentication options via a time-based one-time password (TOTP). This enhancement further expands authentication options and provides customers with added flexibility. Implementing this authentication option requires the end user to have a two-factor authentication app such as Google Authenticator or Microsoft Authenticator.

As part of the configuration process the user will register their two-factor app with BeyondInsight.

BeyondInsight's ServiceNow Connector for Ticket Validation to Use SamAccountName, UPN, or Email as an Identifier

The previous BeyondTrust ServiceNow Connector for Password Safe ticket validation was limited to only comparing the logged-on username in BeyondInsight against the ServiceNow username. This comparison was not always adequate and as such, the connector should be configurable to map via other options.

In this release, the ServiceNow ticket system connector has been enhanced to allow the user to specify a "User ID Mapping" which can be:

User Name

Email Address

UPM (User Principal Name)

About BeyondTrust

BeyondTrust is the worldwide leader in Privileged Access Management (PAM), empowering organizations to secure and manage their entire universe of privileges. Our integrated products and platform offer the industry's most advanced PAM solution, enabling organizations to quickly shrink their attack surface across traditional, cloud, and hybrid environments.

The BeyondTrust Universal Privilege Management approach secures and protects privileges across passwords, endpoints, and access, giving organizations the visibility and control they need to reduce risk, achieve compliance, and boost operational performance.

Our products enable the right level of privileges for just the time needed, creating a frictionless experience for users that enhances productivity.

With a heritage of innovation and a staunch commitment to customers, BeyondTrust solutions can easily deploy, manage, and scale as businesses evolve. We are trusted by 20,000 customers, including 70 percent of the Fortune 500, and a global partner network. Learn more at www.beyondtrust.com.
