

# BeyondTrust Password Safe v21.3

Feature Release – Dec 2, 2021

**BeyondTrust Password Safe** combines privileged password and session management capabilities to discover, manage, and audit all privileged credential activity. Password Safe enables control of privileged user accounts, applications, SSH keys, cloud admin accounts, RPA, and more, with a searchable audit trail for compliance and forensics.

With Password Safe, you can:

- Scan, identify, and profile all assets for automated onboarding, ensuring no credentials are left unmanaged.
- Monitor and record live sessions in real-time and pause or terminate suspicious sessions.
- Utilize adaptive access control for automated evaluation of just-in-time context for authorization access requests.
- Achieve complete control and accountability over privileged accounts.

See the release notes for details.

## New Feature Highlights

---

### **Modular Platforms (Software Development Kit)**

Modular Platforms enables developers to extend the capabilities of Password Safe to manage accounts on any platform. Using the .NET MEF plugin architecture, a software developer kit is available to support customers or partners to manage accounts across previously unmanaged systems or application with Password Safe.

## **Password Safe, Secure Remote Access Integration Improvements**

Password Safe now streamlines the administration of endpoints across both products to centralize system and account management by supporting dynamic retrieval of endpoints a user has been granted access to in Password Safe.

## **Oracle Database - Structure**

Password Safe can now discover Oracle Databases that are part of a cluster and intelligently manage cluster nodes, with a single database-managed system being created.

## **Functional Account Auto-Manage**

The account password is now immediately rotated when new functional accounts are added and set for auto-manage, improving Functional Account security posture.

## **Password Safe Cloud: RADIUS Over Resource Broker**

Password Safe Cloud supports multi-factor authentication, leveraging the RADIUS protocol, now made more extensible allowing for administration through the resource broker. Users that do not have RADIUS exposed to the public internet and have an on-prem RADIUS server can now connect to Password Safe Cloud via proxy.

## **Password Safe Cloud: Syslogs Over Resource Broker**

Password Safe Cloud extends support for SIEM integrations to systems that are not exposed to the public internet by enabling the ability to proxy with the Resource Broker.

## About BeyondTrust

BeyondTrust is the worldwide leader in Privileged Access Management (PAM), empowering organizations to secure and manage their entire universe of privileges. Our integrated products and platform offer the industry's most advanced PAM solution, enabling organizations to quickly shrink their attack surface across traditional, cloud, and hybrid environments.

The BeyondTrust Universal Privilege Management approach secures and protects privileges across passwords, endpoints, and access, giving organizations the visibility and control they need to reduce risk, achieve compliance, and boost operational performance.

Our products enable the right level of privileges for just the time needed, creating a frictionless experience for users that enhances productivity.

With a heritage of innovation and a staunch commitment to customers, BeyondTrust solutions can easily deploy, manage, and scale as businesses evolve. We are trusted by 20,000 customers, including 70 percent of the Fortune 500, and a global partner network. Learn more at [www.beyondtrust.com](http://www.beyondtrust.com).
