Password Safe 23.2

BeyondInsight 23.2

What's New Documentation

Release Date – September 26, 2023

BeyondTrust Password Safe enables complete visibility and control of privileged credentials and secrets in a single solution. Password Safe provides automated discovery and onboarding, management, auditing, and monitoring for any privileged credential across on-prem and cloud environments. The solution simplifies audit and compliance, giving enterprises visibility of privileged activity across the network. Password Safe empowers DevOps teams with the confidence to develop and deploy cloud solutions and secure secrets at the speed of DevOps. And Workforce Passwords brings visibility, control, and audit support for employee business passwords across the enterprise.

With Password Safe, you can:
- Achieve complete visibility and control over privileged accounts and now manage employee business passwords with add-on Workforce Passwords.
- Scan, identify, and profile all assets for automated onboarding, ensuring no credentials are left unmanaged.
- Store secrets used for DevOps, including certificates, API keys, tokens, JSON and XML files, etc., in a secure and audited vault.
- Empower employees with the Workforce Passwords add-on product for Password Safe 23.2 which features a browser plugin and a secure and audited vault to store employee business passwords.
- Monitor and record live sessions in real-time and pause or terminate suspicious sessions.
- Use adaptive access control for automated evaluation of just-in-time context for authorization access requests.

Please see the [release notes](link) for additional details on these important enhancements.

Release Highlights – Password Safe 23.2

Workforce Passwords

As our customers' enterprise applications continue to expand, so do the access credentials for employees. Now enterprises can strengthen their security posture by leveraging Workforce Passwords as a secure credential storage method. Non-privileged users now can use Password Safe to quickly store business application credentials they need for their daily work, using familiar experiences like folder storage and browser plugins.

Workforce Passwords requires that a customer currently owns Password Safe, either deployed on-premises or in the cloud. Continued use of Workforce Passwords requires a per-user license.

Benefits of Workforce Passwords include:

- Secure personal folders to store credentials for each employee
- Chromium-based (Chrome/Edge) web browser extension for credential injection, used to log into enterprise applications
- Full auditing and reporting support

Smart Rules for Application Onboarding

Applications can be managed by Password Safe to help streamline user experiences by providing direct access to a remote application. With the 23.2 release, Password Safe now provides the ability to leverage Smart Rules to simplify the process of assigning applications to Managed Systems and Managed Accounts.

SAP HANA DB Credential Management

Password Safe provides customers with the ability to discover identities across a vast set of platforms, both on premises and in the cloud. With the release of 23.2, Password Safe extends our discovery to include SAP HANA DB. Customers can now leverage Smart Rules to scan their HANA DB instances and discover, onboard, and manage credentials, including rotation of credentials for the identities.

Ansible Integration - (Ansible Tower)

Users of Secrets Safe can now benefit from a new integration with Ansible, one of the most prominent Infrastructure and Configuration Management tools used by developers today. The integration provides an easy-to-use method for Password Safe consumers to secure and manage their Ansible-related secrets for automated CI/CD and DevOps workflows. The Ansible integration is delivered in the form of a Lookup Plugin that customers can use within their playbooks.

Oracle Platform Update

Password rotations on Oracle platforms now supports optionally unlocking the account when a password is rotated. This preserves and enhances existing workflows while maintaining the security of regular password rotation for service accounts.

Release Highlights – BeyondInsight 23.2

Report Scheduling in Password Safe Deployed in the Cloud

Customers with cloud deployments of Password Safe 23.2 now can schedule reports. Report scheduling aids admins in keeping up to date on their auditing needs in a more autonomous manner. Reports can be scheduled on a defined recurring basis, helping administrators remain vigilant by generating access reports on a regular cadence for Security Specialists to review and audit. Ad-hoc reporting is not deprecated and is available for end users who require it.

Smart Rule Ease of Use Updates

You can use Smart Rules to add assets, systems, and accounts into Password Safe management. The selection filters that you configure for the Smart Rule determine the assets that are added as managed systems and managed accounts. Password Safe 23.2 makes it easier to track and understand the results of Smart Rules in practice. This release features enhanced auditing of Smart Rule creation and edits to Smart Rules, and updated navigation between the Smart Rule configuration form and the Smart Rule results grid to allow for quicker feedback on how changes to Smart Rule criteria affects the items in the Smart Rule grid.

Support for Microsoft SQL Server 2022

Customers can configure BeyondInsight 23.2 with MS SQL Server 2022 as its external database. SQL Server 2022 builds on previous releases to grow SQL Server as a platform that provides choices of on-premises or cloud environments, and operating system.

About BeyondTrust

BeyondTrust is the worldwide leader in intelligent identity and access security, enabling organizations to protect identities, stop threats, and deliver dynamic access. We offer the only platform with both intelligent identity threat detection and a privilege control plane that delivers zero-trust based least privilege to shrink your attack surface and eliminate security blind spots.

BeyondTrust protects identities, access, and endpoints across your organization, while creating a superior customer experience and operational efficiencies. We are leading the charge in innovating identity-first security and are trusted by 20,000 customers, including 75 of the Fortune 100, plus a global ecosystem of partners.
