

# U-Series Appliance 4.0

## What's New Documentation

Release Date – October 25, 2022

BeyondTrust® offers a full line of Privileged Access Management (PAM) appliances. These appliances provide multi-platform network discovery, centralized policy enforcement, least privilege enforcement, automated risk assessment, and powerful reporting, compliance, and regulatory audit capabilities.

Please see below details on the latest release for the U-Series appliance. Please refer to the [release notes](#) for additional details on these important enhancements.

### Central Management of Security Updates

---

In previous versions, customers had to log in to each appliance, via the appliance software, to manage the security updates individually on each appliance. With v4.0 customers can now centrally manage security updates (SUPI). Some highlights of this enhancement include:

- View SUPI status and details of remote appliances.
- Remotely schedule or run-now SUPI updates.
- Schedule updates across multiple appliances across multiple time zones with ease.
- Centrally monitor the status of pending or on-going updates.

This feature brings enhanced ease of use for appliance administrators, helping to make gains in productivity and security.

### Support Amazon Relational Database Service (RDS)

---

For appliance-based deployments of BeyondInsight, customers can now leverage the U-Series 4.0 appliance and BeyondInsight 22.3 to use Amazon RDS as an external database. This expansion of supported databases provides expanded functionality and flexibility to BeyondInsight customers.

### Date & Time Zone in blue Appliance Header

---

In the legacy appliance application, the date, time, and time zone were displayed on the bottom right corner of the screen. In v4.0 the blue appliance header on the user interface has been enhanced to show the date, time, and time zone, alongside the already displayed IP address and appliance name. This enhancement provides administrators with an easy and quick way to identify an appliance; this is especially useful when admins are working on multiple appliances at one time.

## About BeyondTrust

BeyondTrust is the worldwide leader in intelligent identity and access security, empowering organizations to protect identities, stop threats, and deliver dynamic access to empower and secure a work-from-anywhere world. Our integrated products and platform offer the industry's most advanced privileged access management solution, enabling organizations to quickly shrink their attack surface across traditional, cloud, and hybrid environments.

BeyondTrust protects all privileged identities, access, and endpoints across your IT environment from security threats, while creating a superior user experience and operational efficiencies. With a heritage of innovation and a staunch commitment to customers, BeyondTrust solutions are easy to deploy, manage, and scale as businesses evolve. We are trusted by 20,000 customers, including 75 of the Fortune 100, and a global partner network. Learn more at [www.beyondtrust.com](http://www.beyondtrust.com).
