

BeyondInsight for Unix & Linux 9.3

New and Updated Features – August 4, 2020

BeyondInsight for Unix & Linux (BIUL) is the industry's most innovative and comprehensive Privileged Access Management platform. The platform maximizes visibility, simplifies deployment, automates tasks, improves security, and reduces privilege-related risks.

This release focuses on access control, the ability to upload software from custom locations, enhancements to installation templates, host tagging and dozens of usability updates and new features.

Please see the [release notes](#) for additional details on these important enhancements.

New Feature Highlights

Access Control

Access Control allows an administrator to limit users to specific sections of the application. A user with the Policy Editor role, for example, would have access to the Policy section of the application, but would not be able to manage users. BIUL has a number of native access control types that can be assigned via either the user object itself and via group membership from either Active Directory or RedHat IDM. A number of application sections have been added to support managing users, groups and roles.

Now, not everyone has admin rights to the entire system. With this version, we can now not only control who has rights but where they have rights. We can restrict user A to section A and user B to section B.

Software Uploads

Customers are now able to deploy software to all their servers easily via BIUL by simply uploading the software from any location to the management platform. Once uploaded, the customer can upgrade all their servers without typing a single command on the server.

Installation Templates

In addition to the current basic Installation Templates, customers will now benefit from an expanded set of Installation Templates that can be customized to suit their installation requirements. These custom templates determine which components of PMUL would be installed.

Host Tagging

Host Tagging allows customer to add a tag to all policy servers. This tag can then be used to filter hosts in other views in the application providing a quick user-defined way to identify and find important assets in the system.

Host Inventory and Actions Wizard

The former Discovery and Host Management sections have been re-envisioned. Discovery has now been added to a new Host Inventory section. This section is used to manage hosts in the system. Additionally, Host Actions, such as deploying software now take place in a modern wizard style environment, simplifying the process. From Inventory, users can select a single host or multiple to launch the wizard, which will guide them through the steps to complete the task and includes a progress status as the task executes.

Other Improvements

Dozens of usability updates and new features, including the ability update SSH ports, an interface to update and set policy and log servers including multiple values for each, new User and Groups sections with details for individual entries, increased platform support for profiling, and many more.

Other Enhancements/Fixes

- Added confirmation to logout button
- SSH port is now configurable in host details
- Policy and log server for PMUL are now editable via host details-> PMUL settings.
Multiple log and policy servers can be configured

About BeyondTrust

BeyondTrust is the worldwide leader in Privileged Access Management (PAM), empowering organizations to secure and manage their entire universe of privileges. Our integrated products and platform offer the industry's most advanced PAM solution, enabling organizations to quickly shrink their attack surface across traditional, cloud and hybrid environments.

The BeyondTrust Universal Privilege Management approach secures and protects privileges across passwords, endpoints, and access, giving organizations the visibility and control they need to reduce risk, achieve compliance, and boost operational performance. Our products enable the right level of privileges for just the time needed, creating a frictionless experience for users that enhances productivity.

With a heritage of innovation and a staunch commitment to customers, BeyondTrust solutions are easy to deploy, manage, and scale as businesses evolve. We are trusted by 20,000 customers, including 70 percent of the Fortune 500, and a global partner network. Learn more at www.beyondtrust.com.
