

Privilege Management Cloud 21.7

New and Updated Features – October 26, 2021

BeyondTrust Privilege Management for Windows & Mac pairs powerful least privilege management and pragmatic application control capabilities, delivering fast, unmatched preventative endpoint security. Grant the right privilege to the right application – not user – only when needed and create a single audit trail. Prebuilt policy templates stop attacks involving trusted apps, addressing bad scripts and infected email attachments immediately. Application control, allow lists, and exception handling granular control over what users can install or run, and what applications can execute. Operationalize quickly with our QuickStart feature and simplified deployment models, for fast time-to-value and streamlined compliance.

This release provides improved activity auditing, a foundational API, Splunk integration, plus more usability enhancements.

Please see the [release notes](#) for additional details on these important enhancements.

New Feature Highlights – Privilege Management Cloud (PM Cloud)

Improved Activity Auditing

In this release, we continue to enhance auditing for further granulation and improvement of the user experience and effectiveness of the audit data – making it easier to see previous and current state to track changes made by users.

Management API Version 1

We are excited to announce the foundation of the authenticated, RESTful Management API, which includes the capability to:

- Retrieve an endpoint list
- Retrieve policy lists
- Retrieve group lists

More capabilities will be added to each release to provide support for new integration and automation use cases.

Web Policy Editor – Mac Improvements

Now it is possible to target Mac endpoints via the computer filter functionality – such as IP address/range and machine hostname – allowing for more granular policy management and more use cases.

Direct Splunk Integration Splunk's HTTP Event Collector.

The new Splunk integration allows you to configure a direct SIEM integration from PM Cloud to your Splunk instance. Configuring the Splunk integration allows you to forward all your endpoint audit event data and console activity audit data to your SIEM for further analysis and event correlation.

An administrator can configure their Splunk integration by providing a hostname, index, token, and SIEM format. Based on the information provided, the Splunk integration will use a connector to push data from PM Cloud into Splunk via the Splunk HTTP Event Collector.

Configurable PM Cloud Portal Timeout

This new feature allows administrators to configure the timeout to ensure you can be more productive when viewing reports and/or editing policy.

Open ID Setup Wizard to Support Sign-ins With OKTA and Azure AD

This new setup wizard for authentication into the PM Cloud management console brings the ability for customers to use their Okta or Azure AD IdP to sign into the product. This will also enforce any MFA settings configured for those users within the IdP.

Now, instead of a generating an Azure B2B Invite URL, PM Cloud sends a URL to a setup wizard and plugs into OpenID connection information for federated access to systems like Azure AD and Okta. This URL is available for one-time use. Once the setup wizard is completed, the lone user, an Administrator, can fully use the system, just as they could prior to this enhancement.

Other Enhancements

- Bulk CSV Exporting of Reporting Data
- Support for ServiceNow Service Catalog Requests in User Request Management

About BeyondTrust

BeyondTrust is the worldwide leader in Privileged Access Management (PAM), empowering organizations to secure and manage their entire universe of privileges. Our integrated products and platform offer the industry's most advanced PAM solution, enabling organizations to quickly shrink their attack surface across traditional, cloud, and hybrid environments.

The BeyondTrust Universal Privilege Management approach secures and protects privileges across passwords, endpoints, and access, giving organizations the visibility and control they need to reduce risk, achieve compliance, and boost operational performance. Our products enable the right level of privileges for just the time needed, creating a frictionless experience for users that enhances productivity.

With a heritage of innovation and a staunch commitment to customers, BeyondTrust solutions are easy to deploy, manage, and scale as businesses evolve. We are trusted by 20,000 customers, including 70 percent of the Fortune 500, and a global partner network. Learn more at www.beyondtrust.com.
