

Privilege Management Cloud 22.2

New and Updated Features – March 31, 2022

BeyondTrust Privilege Management for Windows & Mac pairs powerful least privilege management and pragmatic application control capabilities, delivering fast, unmatched preventative endpoint security. Grant the right privilege to the right application – not user – only when needed and create a single audit trail. Prebuilt policy templates stop attacks involving trusted apps, addressing bad scripts and infected email attachments immediately. Application control, allow lists, and exception handling provide granular control over what users can install or run, and what applications can execute. Operationalize quickly with our QuickStart feature and simplified deployment models, for fast time-to-value and streamlined compliance.

Please see the [release notes](#) for additional details on these important enhancements.

New Features and Enhancements

Improvements to Azure Active Directory Filtering

The Azure Active Directory integration was released with PM Cloud in January 2021. The 22.2 release provides further enhancements to filters, improving the admin user experience.

- Improving performance around serving groups to WPE and AAD
- Improving supportability accessible cache by the support team when issues arise
- Reducing MS Graph API where they could receive too many calls

Updates to VirusTotal Integration

In this release, VirusTotal Reputation data is now available in ServiceNow, providing an extra layer of information, allowing ServiceNow users to understand the application's reputation from multiple anti-virus sources.

Integration with QRadar

PM Cloud 22.2 introduces an integration with the SIEM solution, QRadar.

This new QRadar integration allows admins to configure a direct SIEM integration from PM Cloud to your QRadar Cloud instance. Configuring the QRadar integration allows organizations to forward all endpoint audit event data and console activity audit data to QRadar for further analysis and event correlation.

Other Enhancements

- Phase 1 Angular migration for Privilege Management Reporting (PMR)

- The Web Policy Editor (WPE) can now be used for configuration of authentication and authorization of messages

About BeyondTrust

BeyondTrust is the worldwide leader in Privileged Access Management (PAM), empowering organizations to secure and manage their entire universe of privileges. Our integrated products and platform offer the industry's most advanced PAM solution, enabling organizations to quickly shrink their attack surface across traditional, cloud, and hybrid environments.

The BeyondTrust Universal Privilege Management approach secures and protects privileges across passwords, endpoints, and access, giving organizations the visibility and control they need to reduce risk, achieve compliance, and boost operational performance. Our products enable the right level of privileges for just the time needed, creating a frictionless experience for users that enhances productivity.

With a heritage of innovation and a staunch commitment to customers, BeyondTrust solutions are easy to deploy, manage, and scale as businesses evolve. We are trusted by 20,000 customers, including 70 percent of the Fortune 500, and a global partner network. Learn more at www.beyondtrust.com.
