

Privilege Management for Windows & Mac Client & Cloud 23.9

What's New Documentation

Release Date – October 31st, 2023

BeyondTrust Privilege Management for Windows and Mac pairs powerful least privilege management and pragmatic application control capabilities, delivering fast, unmatched preventative endpoint security. Grant the right privilege to the right application – not user – only when needed and create a single audit trail. Prebuilt policy templates stop attacks involving trusted apps, addressing bad scripts and infected email attachments immediately. Application control, allow lists, and exception handling provide granular control over what users can install or run, and what applications can execute. Operationalize quickly with our QuickStart feature and simplified deployment models, for fast time-to-value and streamlined compliance.

Please see the [release notes](#) for additional details on these important enhancements.

Release Highlights

Enhancement: Persistent Saved Views & User Events in Analytics v2

Analytics v2 provides you with more intuitive insights about your users' behavior, and a path to seamlessly convert those insights into targeted policy updates that bolster your organization's security. In addition, it gives you visibility into your user logons, providing you with detailed information about each user logon occurring within your organization, and flagging if any of them are being executed with local admin rights. With release 23.9, we're introducing two new enhancements to Analytics v2 that make saved views easier to use and improve the workflows around viewing and acting on user logon information.

Saved views allow IT and security admins to create customized views in Analytics v2 to meet their specific needs and quickly access them whenever needed. Previously, saved views could be lost if that IT or security admin was using a different machine, a different browser, or cleared their cache. Release 23.9 introduces a solution to that problem. Saved views will now be stored in the cloud instead of locally, allowing them to be accessed seamlessly from any machine or browser, even after the cache has been cleared.

Through the **Users** tab, Analytics v2 provides visibility into which users are logging in in your estate, along with their account privileges, account type, and other details. Now, with release 23.9, you will also see a link to the Events table next to each user. When you click this link, you are taken directly to a pre-filtered list of events that user has performed, allowing for quick investigation of that user's actions. This

enhancement to the **user logons view** provides you with streamlined workflows and improved visibility of the users in your organization and the actions they're performing.

Enhancement: View & Edit Multiple Policies at a Time in the WPE

When editing or creating policies, IT and security admins often compare and contrast between two separate policies. These could be test and production versions of the same policy or two unrelated policies from which they want to copy/paste rules. Until now, the Web Policy Editor has not supported viewing multiple policies at the same time. Release 23.9 introduces that support, providing IT and security admins with flexible, streamlined workflows to quickly update, edit, and create policies.

Enhancement: Agent Performance Improvements

In release 23.9, we've made improvements to the way that file hashes are calculated, introducing caching to decrease overall activity. These changes will improve agent performance, allowing for a faster, more usable experience for users and administrators alike.

About BeyondTrust

BeyondTrust is the worldwide leader in intelligent identity and access security, empowering organizations to protect identities, stop threats, and deliver dynamic access to empower and secure a work-from-anywhere world. Our integrated products and platform offer the industry's most advanced privileged access management (PAM) solution, enabling organizations to quickly shrink their attack surface across traditional, cloud, and hybrid environments.

BeyondTrust protects all privileged identities, access, and endpoints across your IT environment from security threats, while creating a superior user experience and operational efficiencies. With a heritage of innovation and a staunch commitment to customers, BeyondTrust solutions are easy to deploy, manage, and scale as businesses evolve. We are trusted by 20,000 customers, including 75 of the Fortune 100, and a global partner network. Learn more at BeyondTrust.com.
