

# Endpoint Privilege Management for Windows & Mac SaaS 24.2

What's New Documentation

Release Date – March 26<sup>th</sup>, 2024

BeyondTrust Endpoint Privilege Management for Windows and Mac pairs powerful least privilege management and pragmatic application control capabilities, delivering fast, unmatched preventative endpoint security. Grant the right privilege to the right application – not user – only when needed and create a single audit trail. Prebuilt policy templates stop attacks involving trusted apps, addressing bad scripts and infected email attachments immediately. Application control, allow lists, and exception handling provide granular control over what users can install or run, and what applications can execute. Operationalize quickly with our QuickStart feature and simplified deployment models, for fast time-to-value and streamlined compliance.

Please see the [release notes](#) for additional details on these important enhancements.

## Release Highlights

### Enhancement: Bulk Add to Policy in Analytics v2

---

Analytics v2, the reporting functionality in Endpoint Privilege Management for Windows and Mac, provides you with intuitive insights about your users' activity, and a path to seamlessly convert those insights into targeted policy updates that bolster your organization's security posture. With release 24.2, it's now even easier to quickly action policy updates directly from Analytics v2.

We heard feedback from our customers that they often want to add multiple application definitions to their policies from Analytics v2 at once, especially during deployment. Historically, Analytics v2 hasn't supported this, limiting customers to adding single application definitions to their policies at a time. We've now changed that with release 24.2. You can now add up to 200 application definitions to your policies at one time directly from the events grid within Analytics v2. This enhancement streamlines the policy management process, helping you to deploy Endpoint Privilege Management for Windows and Mac faster and manage ongoing policy refinement more efficiently.

### Enhancement: Policy Search in the Web Policy Editor

---

Historically, IT or security admin users may have faced challenges in locating specific policy elements within the Web Policy Editor, forcing them to recall, for example, which workstyle a specific application group resides within. This could become particularly difficult for those organizations with a complex infrastructure of policies.

In release 24.2 we're introducing policy search capabilities into the Web Policy Editor. Now you can use the search functionality to query your policy from any page within the Web Policy Editor. This allows you to search for specific applications, application groups, application matching criteria, workstyles, account filters, computer filters and more without having to navigate the user interface of the Web Policy Editor or use filters. This enhancement streamlines the policy management process, increasing usability and driving efficiency for you and your teams.

## Enhancement: Microsoft Entra ID Status and Group Resyncs

---

With release 24.2, we're introducing a new banner to the Active Directory Settings page within the Configuration module in the Endpoint Privilege Management Console. This banner shows the status of your Microsoft Entra ID configuration, alerting you when it's no longer valid. Additionally, you can now force a re-sync of your Web Policy Editor groups and group membership from the Active Directory Settings page so you no longer have to wait for them to update on their own after Microsoft Entra ID groups have been added or removed. These enhancements give you greater visibility into and control of your Microsoft Entra ID integration so you can ensure its working properly to support your organization.

## About BeyondTrust

BeyondTrust is the worldwide leader in intelligent identity and access security, empowering organizations to protect identities, stop threats, and deliver dynamic access to empower and secure a work-from-anywhere world. Our integrated products and platform offer the industry's most advanced privileged access management (PAM) solution, enabling organizations to quickly shrink their attack surface across traditional, cloud, and hybrid environments.

BeyondTrust protects all privileged identities, access, and endpoints across your IT environment from security threats, while creating a superior user experience and operational efficiencies. With a heritage of innovation and a staunch commitment to customers, BeyondTrust solutions are easy to deploy, manage, and scale as businesses evolve. We are trusted by 20,000 customers, including 75 of the Fortune 100, and a global partner network. Learn more at.
