

# Privileged Remote Access 23.3

## What's New Documentation

Release Date – October 3rd, 2023

BeyondTrust Privileged Remote Access enables security professionals to control, manage, and audit authorized access to cloud applications, IT, and OT systems. PRA enforces least privilege protocol over both internal and third-party access to critical systems and data with Jumpoints and Jump Clients. Using granular, customizable security policies down to the user level, provide employees and vendors secure just-in-time access to applications and systems. Enable developers and engineers to operationalize efficiently in cloud environments with ephemeral accounts, and even ephemeral Jump Clients. This release includes enhancements enabling your teams to have seamless one-click systems access and expanded admin capabilities built for organizations focusing on scale.

Please see the [release notes](#) for additional details on these important enhancements.

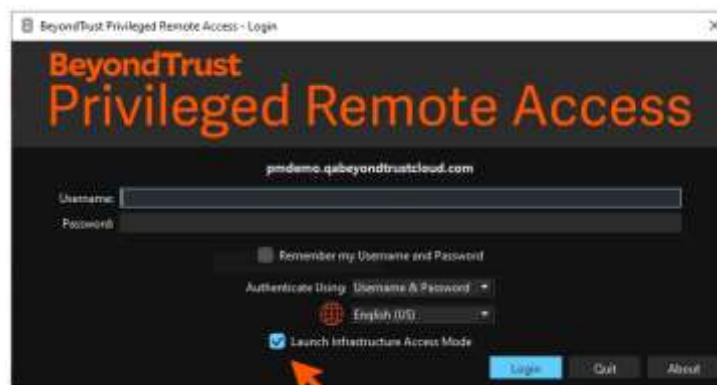

## Release Highlights

### Enhancement: Faster, Lighter, More Secure Remote Tunneling and Access

Empower all your technical staff including developers, engineers, and remote workers, to achieve their daily tasks without the burden of the full Access Console. When it comes to privileged users remotely accessing secure systems, Privileged Remote Access delivers the lightweight solution that users expect, with a powerful console for users at the helm.

Now, users will find centralized controls for your Jump Item list, Active Sessions, Session Initiation, and Credential Injection pre-session window, all integrated in Infrastructure Access Mode – just check the box when launching Privileged Remote Access.

Access with Infrastructure Access Mode offers a faster experience with all controls centralized in one tab and keeps access lightweight and secure by reducing the need for the Access Console. Ensure all data stays within the cloud, with our industry-leading session monitoring capabilities, for every single access session.

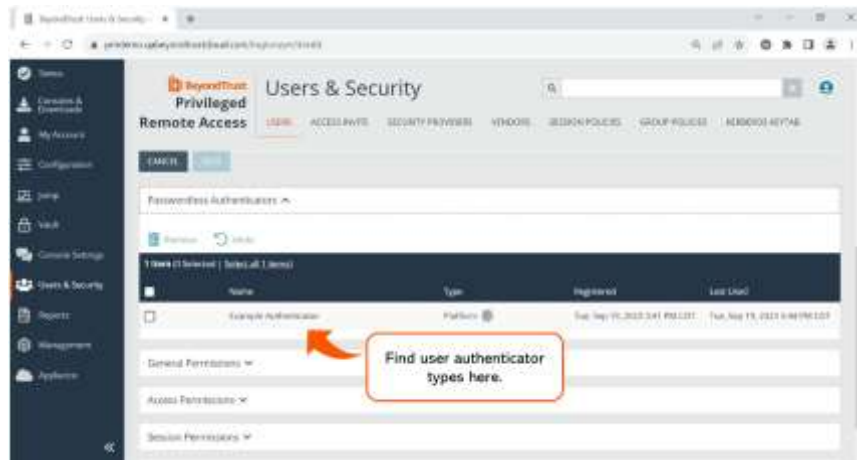

**Check “Launch Infrastructure Access Mode” on launch to get started.**

## Enhancement: Features Designed for Organizations that Scale

As your organization scales and grows, so does the number of your privileged accounts. Privileged Remote Access is designed to empower your organization to scale and grow. In addition to expanding the capacity of our vendor groups, we’ve made it easier than ever for teams to work efficiently with increases in activity volume. Know which Jump Items you can connect to with a view of in-use statuses and connect to virtual machines with your favorite Jump Clients already set up with our Jump Client Generic Installer.

With increased capacity comes increased risks – and PRA helps users stay ahead of it with better oversight and increased security with enhancements to the Admin Console. Now, admins can quickly pinpoint and identify users who are not using FIDO2 Passwordless Authentication. Let no privileged account go unnoticed, with centralized control at your fingertips.

**Find a new Passwordless Authentication view in the Users & security tab.**

## About BeyondTrust

BeyondTrust is the worldwide leader in intelligent identity and access security, enabling organizations to protect identities, stop threats, and deliver dynamic access. We offer the only platform with both intelligent identity threat detection and a privilege control plane that delivers zero-trust based least privilege to shrink your attack surface and eliminate security blind spots.

BeyondTrust protects identities, access, and endpoints across your organization, while creating a superior customer experience and operational efficiencies. We are leading the charge in innovating identity-first security and are trusted by 20,000 customers, including 75 of the Fortune 100, plus a global ecosystem of partners.
