BeyondTrust Representative Console

This guide is designed to help you install the BeyondTrust representative console onto your computer and understand the features of the solution. BeyondTrust enables you to support your customers remotely by connecting to them through the BeyondTrust Appliance B Series.

SALES: www.beyondtrust.com/contact SUPPORT: www.beyondtrust.com/support DOCUMENTATION: www.beyondtrust.com/docs

Install the Representative Console

In any web browser, go to the URL of your B Series Appliance followed by *llogin* and enter the username and password set by your administrator. You may be prompted to change your password the first time you log in.

From the **My Account** page, download and install the BeyondTrust representative console. The option will default to the appropriate installer for your operating system.

Note: On a Linux system, you must save the file to your computer and then open it from its downloaded location. Do not use the **Open** link that appears after downloading a file from some browsers.

When the installation wizard appears, follow the instructions to install the software. After installing the representative console, you can choose **Run Representative Console Now** and **Run at Startup**, and then click **Finish**.

Note: If you choose Run Representative Console Now during installation, a login prompt will appear on your screen.

×

Log in to the Representative Console

After installing the BeyondTrust representative console, launch the console from its directory location as defined during installation.

Note: By default, in Windows, you can access the console from Start Menu > All Programs > BeyondTrust > support.example.com, where support.example.com is the hostname of the site from which you downloaded the console.

If the Login Agreement has been enabled, you must click **Accept** to proceed.

For more information on how to set up, enable or disable this feature, please see <u>Site Configuration: Set HTTP Ports, Enable</u> <u>Prerequisite Login Agreement at</u> <u>https://www.beyondtrust.com/docs/remote-support/getting-</u> started/admin/site-configuration.htm.

At the prompt, enter your username and password.

Use Passwordless Login

FIDO2-certified authenticators can be used to securely log in to the desktop representative console, web rep console, and the /login administrative interface without entering your password. You can register up to 10 authenticators.

If passwordless login has been enabled, **Authenticate Using** may default to **Passwordless FIDO2**, or it can be selected. The exact process for passwordless login depends on the type of device and manufacturer.

You can enable passwordless login and set the default authentication after logging into the /login administrative interface, by navigating to **Management > Security**, and then registering passwordless authenticators at **My Account > Security**.

Note: Passwordless login for the desktop representative console on macOS or Linux systems is supported only for roaming authenticators (such as the YubiKey hardware security keys). Platform or integrated authenticators (such as Face ID and fingerprint scanners) are not supported for the desktop desktop representative console login when using macOS or Linux systems.

Use Kerberos Server

If your administrator has configured a Kerberos server to enable single sign-on, you can log in to the console without entering your credentials. The representative console remembers the last used login mechanism, whether it used local credentials, Kerberos, or another security provider.

Invited users can also enter a session key to join a shared session on a one-time basis.

Check **Remember my login information** to have the console save your username and password. This option can be enabled or disabled from /login > Management > Security.

If you have multiple languages enabled for your site, select the language you wish to use from the dropdown beside the globe icon. If you wish to change the selected language after logging in, you must log back out to choose another language.

	Login	Quit	About

Once you log in, the console will open, and a BeyondTrust icon will appear in your computer's system tray. If you close the console but remain logged in, you can reopen the window by double-clicking the system tray icon or by right-clicking the icon and selecting **Show Window**.

Note: Your administrator might require you to be on an unrestricted network to log in to the console. This network restriction might apply only the first time you log in or every time.

If you lose your connection, the representative console attempts to reconnect for 60 seconds. If your connection is restored within this time, your representative console reopens, restoring all of your open sessions. If the connection cannot be restored within this time, your sessions fall back according to the rules set on */login > Configuration > Options*, and you are prompted to retry login or quit.

If you are logged into the representative console in one location and then log in from another, your open sessions are maintained.

Note: To log in with an account already in use and forcibly close the connection on the other system, the setting **Terminate Session If Account Is In Use** must be checked on the /**Iogin > Management > Security** page.

After an upgrade or at first launch of the desktop representative console, a **What's New** dialog appears automatically upon login for all non-invited representatives. This dialog may be viewed at any time through **Help > What's New** and shows new release information for current and past releases. This is a roaming preference per account, so the dialog appears just once regardless where a representative signs in from.

i

For more information about invited users, please see <u>Rep Invite: Create Profiles to Invite External Representatives to</u> Sessions at https://www.beyondtrust.com/docs/remote-support/getting-started/admin/rep-invite.htm.

depository institution. It is not authorized to accept deposits or trust accounts and is not licensed or regulated by any state or federal banking authority.

Representative Console User Interface

Sessions: Manage multiple remote sessions at the same time.

Note: Session tabs can be moved and reordered to help you organize and prioritize your workload. Simply click and drag a session tab to a new position. Session tabs can also be detached from the main representative console window.

Quick Start Buttons: Easily access frequently needed tools. Quick start buttons can be turned on or off from File > Settings.

- Start: Open a dialog for a quick-reference guide to starting a session.
- Session Key: Begin sessions with randomly generated, one-time use session keys.
- Support Buttons: View details and usage statistics of deployed Support Buttons.
- **Present**: Share your screen with one or more remote attendees. Start a presentation immediately or schedule a presentation for a later time.
- Jump To: Jump to a computer on a remote network via Jumpoint or on your local network. BeyondTrust's Jump Technology
 enables privileged representatives to connect to an unattended remote computer to start a session without end-user assistance.
- **RDP**: Start a Remote Desktop Protocol session with a remote Windows system.
- VNC: Start a VNC session with a remote Windows system.
- Shell Jump: Quickly connect to SSH-enabled and Telnet-enabled network devices through a deployed Jumpoint.
- Intel® vPro: Using Intel[®]Active Management Technology, support fully provisioned Intel[®]vPro Windows systems below the OS level.

Queues: Queues list customers who are waiting for support or who are in a session. Details about the remote system being supported appear in this section.

Dashboard: Privileged users can view and monitor ongoing sessions and teammates of a lower role, providing administrative oversight to help manage staff. Status indicators show whether representatives are available, are idle, are busy, or have auto-assign turned off. A bar at the bottom of the dashboard shows the percentage of representatives in each state.

Access Requests: If a representative is a sponsor in one or more Access Sponsor groups, they see an Access Requests tab in the representative console. When a representative makes a request, all sponsors in the selected access sponsor group see a new request in the Access Requests tab of the representative console.

Jump Item Interface: Installed Jump Clients and Jump shortcuts appear here, grouped according to who can access them.

Representative Status: If you have opted out of automatic session assignment, you can set your status from this dropdown. Your team managers see your status on their dashboard. If your administrator has configured custom statuses, you may select any of these here if you want your status to display as something other than a default status of Available, Busy, or Away.

Chat: Chat with other logged in users. You also can share your screen with a team member without requiring a session.

depository institution. It is not authorized to accept deposits or trust accounts and is not licensed or regulated by any state or federal banking authority.

Change Settings and Preferences in the Representative Console

Click on File > Settings in the upper left corner of the console to configure your preferences.

In general, you may configure the console settings according to your preferences. However, your BeyondTrust administrator may choose to manage your settings, possibly enforcing those managed settings.

	Quit	сс

If your BeyondTrust administrator has changed and applied the default settings, then a **Settings Changed** alert appears the next time you log in to your console. Click **View Settings** to open your settings window to view the changes, or simply click **OK** to acknowledge the changes.

Settin	ngs Changed	\times
i	The administrator has changed one or more of your Representative Console settings.	
	View Settings OK	

Changing Settings

Note: These instructions assume you are allowed to choose the settings used in your console. Settings enforced by your administrator appear marked with an asterisk and grayed out, and they are not locally configurable. Please see your administrator or <u>Manage Representative Console Settings</u> at <u>https://www.beyondtrust.com/docs/privileged-remote-access/getting-started/admin/access-console-settings.htm</u> for more information.

Each console settings window includes a **Restore Defaults** button in the lower left corner of the window. Clicking the button returns all of your settings to the BeyondTrust default settings or to the default settings applied by your administrator, if any have been set. An alert dialog asks you to confirm that you wish to change to the defaults. Click **Cancel** if you wish to return to your locally saved preferences.

Representative Console Settings
 Are you sure you want to reset all settings to the default values?
 OK Cancel

Note: If any of the defaults are forced by your administrator, you are unable to configure them.

From the **Global Settings** section, you can choose to enable or disable spell check for chat and session notes. Currently, spell check is available for US English only.

If, under **Quick Start Buttons**, you select **Start Session**, a **Start** button appears at the top of your representative console. Clicking this button walks you through the ways your customer can start a support session. You also can select **Session Key** to display a session key generation button, and select **Support Buttons** to display a button to launch the Support Button management interface. Select **Jump To**, **RDP**, **VNC**, **Shell Jump**, and **Intel® vPro** to display buttons to launch those respective Jump connections. **Start Presentation** allows you to easily start a new presentation.

Choose whether you want the session menu icon to display, whether the sidebar can be detached, and whether the widgets on the session sidebar can be rearranged and re-sized.

If real-time chat translation is enabled for your site, select your preferred chat language from the dropdown menu. This lets the rep console know what language you type in so that chat messages can be translated to the customer's selected language and vice-versa.

You can choose to change your display mode. Options include OS Setting (default), Light Mode, and Dark Mode.

Note: The Dark Mode option applies to Windows and macOS only.

In addition to switching the display mode within the access console, users can change it in **OS Settings** by selecting **Themes** and related settings > Color > Choose your color.

The **CLI** section indicates if a Command Line Interface tool is installed for this installation of the Representative Console. If it is not installed, you can choose to install it by clicking **Install**.

Choose your alert settings for chat messages. When you receive a chat message, you can choose to hear a sound and to see the application icon flash.

If you would like to upload a custom sound for chat messages, click the ... button and select a WAV file on your computer. The file can be no larger than 1MB.

Choose whether the team chat should include status messages, such as users logging in and out, or only chats sent between team members.

Choose whether you want to receive pop-up notifications for messages received in a team chat and/or in a session chat.

SALES: www.beyondtrust.com/contact SUPPORT: www.beyondtrust.com/support DOCUMENTATION: www.beyondtrust.com/docs

Choose if you want to hear an audible alert when a customer enters one of your queues and/or when a waiting session has been marked as overdue. If you would like to upload a custom sound for either of these alerts, click the [...] button and select a WAV file on your computer. The file can be no larger than 1MB.

Also choose whether you want to see the application icon flash when a customer enters one of your queues and/or when a waiting session has been marked as overdue. Additionally, when a customer enters your personal queue, such as by clicking on your name or entering a session key on the public site, the session can start immediately or prompt for your acceptance.

You also can choose to receive pop-up notifications for certain events. These notifications appear independent of your console and on top of other windows. Set where you wish to see pop-ups and how long they should display.

Choose whether you want to start sessions with chat only or to immediately request screen sharing.

You can choose to open sessions as tabs in the console or to automatically detach sessions into new windows.

For situations where you might experience issues because a customer's secure desktop is enabled, you can be prompted to elevate to run with administrative rights when the session begins.

Customer-Initiated Sessions

There are multiple ways for customers to initiate a remote support session with a rep.

Email

Reps can generate an email message containing a hyperlink. To receive support, the recipient of the email clicks the link, triggering the customer client to download on their system. This establishes a secure connection to the rep who issued the invitation.

URL

Reps can generate a hyper linked URL for the remote user through a variety of methods such as a text chat.

BeyondTrust

BeyondTrust Web Portal

BeyondTrust allows you to create web support portals, or public web sites, for your BeyondTrust Appliance B Series. These portals allow your customers to request support utilizing BeyondTrust's remote support software. Each support portal can be configured to support your organization's branding and support processes. This includes customizing logos and allowing customers to start a BeyondTrust session using click-tochat.

For more information about support portals, please see <u>How to</u> <u>Customize Support Portals</u> at <u>https://www.beyondtrust.com/docs/remote-support/how-</u> to/customize-portals/index.htm.

• **Representatives**: You can present a list of logged-on reps, allowing customers to click on a rep's name to begin the customer client download. When the download is complete, a session is started with the rep.

Support Portal
Important Messages
MPORTANT Our email servers are currently down. If you are having trouble with email, please wait to request support until this email server issue is resolved. Thank you for your patience.
Representatives ?
4 - Yasmine
Session Key ?
Issue Submission ?
Your Issue Other Issue
Your Name Company Name
Company Kane
Describe Your Issue

- Session Key: A rep may generate an alphanumeric session key to share with a customer. From there, the customer visits the support portal and enters the session key into the text entry field. This triggers the customer client to download and establishes a secure connection to the rep who issued the invitation.
- **Issue Submission**: The support portal page can be configured to offer a selection of issues which the customer can choose from when seeking support. Customers may select an issue from the dropdown to trigger the customer client to download. This action generates a request in the team queue associated with that specific issue. For example, if the user selects **Email Problems**, the request is routed to a team of reps skilled in supporting email systems.

Support Button

The Support Button is a desktop shortcut previously installed on a customer's workstation that triggers the customer client. When the user clicks the Support Button, they are prompted to enter a session key or describe their issue. Additionally, they may be able to directly join the queue configured for the Support Button. This specific session initiation method may be pre-installed to a standard image and does not require the customer client to be downloaded.

Note: A Support Button cannot be deployed from a session that was started from a SAML authenticated public portal and a Support Button cannot be used to start a session with a public portal that requires SAML authentication.

For more information about Support Buttons, please see <u>Support Button: Quickly Request Support</u> at <u>https://www.beyondtrust.com/docs/remote-support/getting-started/customer-client/support-button.htm</u>.

Elevation

For each customer-initiated session start method, the customer client runs in the context of the logged-on user. As a result, the Windows User Access Control (UAC) prompt presents challenges to providing support. To allow support in these situations, BeyondTrust offers the ability to elevate the customer client. This simply means the customer client running as the logged-on user can be elevated to a system service by providing administrative credentials to the customer's system.

Blevate Custo	omer Client	×
Please select me	thod for elevation of the customer client privileges.	
O Prompt Cust	omer	
Specific User	r	
User Name:	user@domain	
Password:		
	OK Cancel	

This process generates a UAC prompt not seen through screen sharing and must be answered by the customer. This prompt does not require enduser credentials. They only need to click **Yes**.

Once completed, the customer client runs as a system service. As a result, all subsequent UAC prompts are visible when screen sharing.

mer Client
ation
No

Rep-Initiated Session

BeyondTrust Jump Client (pre-installed running agent)

The BeyondTrust Jump Client is a running service that allows a rep to initiate a support session to a specific remote system through the representative console. This can be used to initiate sessions to unattended systems where no user is present, or can be used as the default method for providing support to customers. Although the session is rep-initiated, permissions within BeyondTrust allow flexibility on whether or not reps need to prompt the customer for access and can even check for the presence of a logged-on user. Furthermore, access to the individual Jump Clients can be controlled individually or by group membership within BeyondTrust, and different groups can have different permissions.

For more infomation on Jump Clients, please see <u>Remote Support Jump Client Guide</u>: Unattended Access to System in Any Network at https://www.beyondtrust.com/docs/remote-support/how-to/jump-clients/index.htm.

SALES: www.beyondtrust.com/contact SUPPORT: www.beyondtrust.com/support DOCUMENTATION: www.beyondtrust.com/docs

Jump To (ad-hoc)

The second rep-initiated method for starting a support session is BeyondTrust Jump To. Jump To allows reps to use the representative console to push the customer client to a remote workstation to initiate a support session. Like downloading the client from a portal page, this is an ad-hoc session in which no items are pre-installed and everything is removed once the session is completed. Unlike most of the other methods, there are several dependencies for this session initiation method. First of all, it is available for Windows only. Secondly, it depends on several Windows services to execute, and there are several remote TCP ports that must be accessible on the remote machine. For that reason, BeyondTrust offers a technology called Jumpoints which can help initiate sessions on a remote network.

For more information about Jumpoints, please see <u>Remote Support Jumpoint Guide</u>: <u>Unattended Access to Computers in a</u> <u>Network at https://www.beyondtrust.com/docs/remote-support/how-to/jumpoint/index.htm</u>.

SALES: www.beyondtrust.com/contact SUPPORT: www.beyondtrust.com/support DOCUMENTATION: www.beyondtrust.com/docs

Generate a Session Key to Start a Support Session

Dependent upon your account permissions, one method of starting a support session is through the use of one-time, randomly generated session keys. Session keys are not used for authentication. They simply route the customer to the appropriate team or rep and are valid for a limited time. The methods by which the B Series Appliance generates session keys are proprietary information. When your customer calls with a support request, generate a new session key from:

- · The Support menu of the representative console
- The Start button at the top of the representative console
- The Session Key button at the top of the representative console
- Pressing Ctrl + F4 or Command + F4

🚯 Support Session Key Generated	×
You may start a support session with a customer by directing them to enter the following session key on your Support Portal, by sending them directly t the following URL, or by emailing an invitation.	0
Session Key: 6020 3542 🗎	
uri: https://t	
Expires:	
September 02, 2021 03:57:52 PM 10 Minutes Public Portal:	
Default: tcers.qa.bomgar.com v	
Send Local Emeil Close	

Set how long you want this session key to remain valid. The expiration time applies only to the length of time the key can be used to start a session and does not affect the length of the session itself.

For more information, please see "Maximum Session Key Timeout" in <u>Security: Manage Security Settings</u> at https://www.beyondtrust.com/docs/remote-support/getting-started/admin/security.htm.

You also can select the public portal through which you want your customer to enter the session, from the portals made available to you by your administrator. The representative console remembers your choice the next time you generate a session key.

Depending on the options selected by your administrator, you may be able to send the invitation from your local email, from a server side email, or by SMS.

Direct your customer either to go to the unique URL or to enter the session key on your public site. After running the customer client, your customer will appear in your personal queue.

View Support Sessions in Queue

Queues

Session queues provide information about and access to customers who are waiting for support. The **Personal** queue contains customers with whom you are currently in session or who are waiting for a session with you specifically. A waiting session appears in your personal queue if it was transferred to you, or if the customer initiated it by entering a session key you generated, by selecting your name from the public site, or by clicking a Support Button tied to you. This queue also contains invitations for you to join a shared session.

You also have queues for any teams of which you are a member. If a customer initiates a session by selecting an issue type from an issue submission form, that customer enters a specific team queue based on which team owns that issue. A customer also enters a team queue if they click a **Support Button** tied to a team. A session may also enter a queue if it is transferred intentionally or due to waiting session rules, or if the representative's connection is lost in the middle of a session. These queues also contain invitations for any representative in the team to join a shared session.

Click the star to the left of a team name to mark that queue as a favorite. If a team chat message is sent, an orange chat bubble appears in place of the star.

Customers can also request assistance directly from a web page which contains a help link. This initiates a browser sharing session, which allows a representative to chat and view the customer's web page. Administrators can generate custom links in order to direct browser sessions to the correct representative or team queue. In the queue, browser sharing sessions are identified by the **[Browser]** prefix next to the customer's name.

Sort your queues by several criteria, including the length of time the customer has been in queue, the customer's name, issue category, etc. All criteria may not be available depending on the manner in which the customer initiated the session. You can also search for an active session. Click on an item in queue to view its details. Click it again to close the details pane. The representative console remembers the column order and the sort order of the session queue the next time the representative console is launched.

Once the customer is in queue, either double-click the customer entry or select the entry and click the **Accept** button. Accepting a session opens a new tab for that session at the top of the representative console. You can run multiple sessions simultaneously. A new tab will be created for each session.

For additional ways to accept support requests, please see <u>"Accept a Session to Start Support" on page 22</u>.

Accept a Session to Start Support

Once the customer is in queue, there are several ways you can accept the session. If the session is in your personal queue or if you have permission to manually accept sessions from a team queue, either double-click the customer entry or select the entry and click the **Accept** button. If allowed to use the feature, start supporting the oldest queued session from among your team queues by selecting to get the next session from:

- The Support menu of the representative console
- The Get Next button at the top of the representative console

Session Assignment Rules

You can also accept sessions that are assigned using Equilibrium. When a session enters a queue that has Equilibrium enabled, that session is automatically assigned to the best qualified and least busy representative, based on matching skills, the number of sessions that representative is supporting, and how long they have been available.

When a session is assigned to you, you are given a prompt to accept or reject the session, along with an audible alert if enabled. When the invitation is about to expire, visual and audible alerts warn you. If you reject the invitation or the invitation times out, the session is reassigned to the next best qualified and least busy representative in that queue.

A rejected session is never assigned to the same representative twice unless it is manually transferred into another queue for which that representative is available. If a session cycles through all available

Queue	Uptime	Priority	Time in Queue	Name	Computer
Remote Support	25:54:36	Medium	0:00:31	Mario Fratelli	RMTPLWTO
	Construction A	Assignment Aler	t		×
0					
Hostname .	The next avail like to accept		een automatically as	signed to you. V	Vould you
Hostname			een automatically as	signed to you. V	Vould you

representatives for the queue and is not accepted, it remains in queue until someone manually accepts or transfers it.

Alternatively, if your administrator has set up a waiting session rule for this queue, the session gives out an audible and visual alert when it is overdue, or it is transferred to an overflow queue. If that overflow queue has a waiting session rule set up that transfers the session back to the first queue, the session could potentially bounce back and forth between the queues until it is accepted.

A session is not assigned to a representative if that representative is unavailable. If you lock your computer or switch to the login screen, you are marked as unavailable. Also, rules within the user permissions mark you as unavailable if you are participating in more than a set number of sessions or have been idle longer than a specified length of time. Finally, if you have permission to opt out of session assignments, you may choose not to receive automatic session assignments.

Accepting a session opens a new tab for that session at the top of the representative console. You can run multiple sessions simultaneously. A new tab is created for each session.

Note: Session tabs can be moved and reordered to help you organize and prioritize your workload. Simply click and drag a session tab to a new position. Session tabs can also be detached from the main representative console window.

Ctrl+F4

Generate an Apple iOS Profile Access Key

To distribute your BeyondTrust-enabled public and private profiles to Apple iOS device customers, generate an Apple iOS profile access key from the Support menu of the representative console.

The setting iOS Configuration Profiles Link Enabled must be selected in /login > Public Portals > iOS Configuration for this option to be available.

Click Generate Apple iOS Profile Access Key to launch the Apple iOS Profile Selection interface.

The Apple iOS Profile Selection interface contains available public or private profiles previously configured in the /login interface.

While the public site can be made to show public iOS profiles to anyone who knows the URL, generating an access key is the only way to give a customer access to a private iOS profile.

Here you may select any public or private profiles to securely distribute to your Apple iOS device customers via your iOS-browsable support portal. Click the Generate Access Key button.

Jump Interface

Use Jump Items to Support Remote Systems

BeyondTrust Jump Technology enables privileged users to connect to an unattended remote system to start a session without end-user assistance. Dependent upon your permissions, you may Jump to any computer on your LAN/VPN or on a network with a Jumpoint agent. You can save Jump Shortcuts for frequently accessed machines. To Jump to a non-Windows computer or a system which is not on a network, you can install a Jump Client.

The Jump interface appears in the bottom half of the representative console. The list may contain both active and passive Jump Clients, as well as Jump shortcuts for Remote Jumps, Local Jumps, Remote and Local RDP sessions, Remote and Local VNC sessions, Shell Jumps, and Intel® vPro Jumps. Jump Item availability, including whether or not the Jump Item is in use, is listed in the **Status** column.

Jump Items are listed in Jump Groups. If you are assigned to one or more Jump Groups, you can access the Jump Items in those groups, with the permissions assigned by your admin. Selecting a Jump Group and then clicking **Create** auto-selects that Jump Group in the Jump Item configuration window.

Your personal list of Jump Items is primarily for your individual use, although your team leads, team managers, and users with permission to see all Jump Items may have access to your personal list of Jump Items. Similarly, if you are a team manager or lead with appropriate permissions, you may see team members' personal lists of Jump Items. Additionally, you may have permission to access Jump Items in Jump Groups you do not belong to and personal Jump Items for non-team members.

Jump to a Jump Item

Browse through groups or dynamically search for computers.

To facilitate browsing the Jump Clients list, you may drag the columns into any order you wish, and then sort a column by clicking the column header. The representative console remembers the column order and the sort order the next time the representative console is launched.

In addition to browsing for Jump Clients, you can search based on multiple fields. Enter a string in the search field and then press **Enter**. To change the fields you are searching, click the magnifying glass and check or uncheck any of the available fields. Searchable fields include **Comments**, **Console User**, **Domain**, **FQDN**, **Group**, **Hostname/IP**, **Jump Method**, **Last Accessed**, **Name**, **Private IP**, **Public IP**, **Status**, **Tag**, and **Workgroup**.

Once you have found the computer you wish to access, double-click the entry, or select the entry and click the **Jump** button. This will attempt to start a session with the remote computer.

Note: If you need to access Jump Items when no user is available, make sure the session permissions are set either to disable prompting or to default to **Allow** for unattended sessions.

You may programmatically connect to a Jump Item directly from your systems management or ticketing tool. If your search results in only one Jump Item, the session will start immediately. If multiple Jump Items are returned, select one of the Jump Items listed in the selection window and click **OK**.

For more information about scripting, please see <u>Representative Console Scripting and Client Scripting API</u> at www.beyondtrust.com/docs/remote-support/how-to/integrations/api/client-script/index.htm.

If a Jump Policy enforces a schedule for this Jump Item, an attempt to access the Jump Item outside of its permitted schedule prevents the Jump. A prompt informs you of the policy restrictions and provides the date and time when this Jump Item is next available for access.

Note: If you have permission to modify Jump Policies, the prompt gives you the option to override the schedule and start a session anyway.

Remo	ote Support	×
?	The Jump Policy's schedule does not permit a session to sta A session may start next at: August 22, 2019 05:00 AM Atlant	
	Would you like to override the schedule and start a session a	nyway?
	Yes	No

Copy Jump Items

Jump Items can be copied and can belong to multiple Jump Groups. This includes Jump Client items, providing administrators with the ability to set separate policies and group permissions without requiring an additional Jump Client installation on the target endpoint. Users with the appropriate permissions see the option to **Copy** Jump Items in the Representative Console by right-clicking the item. Users can perform this function on multiple Jump Items as well.

This feature enables admins and users to effectively manage different policies for Jump Items and Jump Clients without the need to create a new Jump Item. This functionality enables users to limit the number of clients necessary to enable Jump Client sessions, and limits manual administrative tasks when defining access pathways for users.

Use Jump Clients to Access Unattended Computers

To access an individual computer without end-user assistance, install a Jump Client on that system either from within a session or from the **Jump Clients** page of the administrative interface. Your account settings determine what Jump Item permissions you have, including which Jump Groups you can access and which types of Jump Items you are allowed to use.

Sort Jump Clients

To facilitate browsing the Jump Clients list, you may drag the columns into any order you wish, and then sort a column by clicking the column header. The representative console remembers the column order and the sort order the next time the representative console is launched.

Search for a Jump Client

In addition to browsing for Jump Clients, you can search based on multiple fields. Enter a string in the search field and then press **Enter**. To change the fields you are searching, click the magnifying glass and check or uncheck any of the available fields. Searchable fields include **Comments**, **Console User**, **Domain**, **FQDN**, **Group**, **Hostname/IP**, **Jump Method**, **Last Accessed**, **Name**, **Private IP**, **Public IP**, **Status**, **Tag**, and **Workgroup**.

Jump Client Details Pane

When you select a Jump Client, a details pane appears to the right of the Jump interface. Which details are shown here is determined by the **Jump Client Statistics** setting in the /login interface as well as by the remote operating system.

If a Jump Client goes offline and does not reconnect to the B Series Appliance for the number of days set by the **Jump Client Settings** in the /login interface, it is labeled as lost. No specific action is taken on the Jump Client. It is labeled as lost only for identification purposes, so that an administrator can diagnose the reason for the lost connection and take action to correct the situation. In the details pane, you will see the scheduled deletion date if the Jump Client does not come back online.

After a software update, Jump Clients update automatically. The number of concurrent Jump Client upgrades is determined by settings on the */login > Jump > Jump Clients* page. If a Jump Client has not yet been updated, it is labeled as **Upgrade Pending**, and its version and revision number appear in the details pane. While you can modify an outdated Jump Client, you cannot Jump to it. Attempting a Jump does, however, move that Jump Client to the front of the upgrade queue.

Wake-On-Lan (WOL)

Wake-On-Lan (WOL) allows you to remotely turn on or wake up machines configured for WOL from BeyondTrust. In a configured environment, customers can power off their machine but still receive BeyondTrust support, if needed.

Note: WOL is not a BeyondTrust technology. The BeyondTrust software integrates with existing WOL systems. To use WOL through BeyondTrust, the system must have WOL enabled, and the network must allow WOL packets to be sent.

To enable support for WOL in BeyondTrust, turn on the WOL setting in the administrative /login interface under **Jump > Jump Clients**. When enabling the WOL option, keep the following items in mind:

- WOL does not work for wireless clients. A wired network connection is required.
- WOL is supported by the underlying system hardware, which is independent of the installed OS.
- WOL is supported only by active Jump Clients. Passive Jump Clients, Jumpoints, and Local Jump from representative consoles do not support WOL.

To wake an active Jump Client using WOL, right-click an existing Jump Client from within the representative console. Attempt to wake the system by clicking the **Attempt to wake up a Jump Client** option.

🕞 Jump 📃 Create 🗸 Remove Prope	rties							Export	Q Search Jump Items X
My Jump Groups Recently Used Personal	Name	Hostname/IP	Jump Method Jump Client	Comments		Group 👤 All	Tag	Status Active [ON]	Front Office
TechCom	Front Office Image: Control of the second	100	Jump Client Jump Client Jump Client Jump Client	Front office on	Jump Attempt to Export Copy	Scott wake up a Jump Client	office	Active [Offline] Active [ON] Active [ON] Active [Offline]	Jump Group Scott Tag office Comments Front office support
All Representatives All Y ^ Chic ^ Hiro ^ Joše (i) J Limn > Noti > Scott v	٢				Remove Properties.			2	Active [Offline] Offline Since 08/20/2019 12:43:39 PM Lst Accessed: Never Hostname / IP FQDN Jump Policy None Customer Present Session Policy None Customer Not Present Session Policy

The wake option is only available when selecting a single Jump Client. It is not available when multiple Jump Clients are selected.

WOL packets are sent from other Jump Clients residing on the same network as the target machine. When an active Jump Client is installed or checks-in, it registers its network information with the B Series Appliance, and the B Series Appliance uses this information to determine which Jump Clients are on the same network.

Once attempting to wake up a selected Jump Client, the WOL option greys out for 30 seconds before being able to attempt to send another wake up request. If no other Jump Clients are available on that same network to send WOL packets to the target machine, the rep receives a message indicating that no other Jump Clients are available on the network. When sending a WOL packet, the rep has an advanced option to provide a password for WOL environments requiring a secure WOL password. A WOL packet is a one-way packet, and no confirmation of success is given to the rep besides seeing the client come online in the representative console.

Copy Jump Items

Jump Items can be copied and can belong to multiple Jump Groups. This includes Jump Client items, providing administrators with the ability to set separate policies and group permissions without requiring an additional Jump Client installation on the target endpoint. Users with the appropriate permissions see the option to **Copy** Jump Items in the Representative Console by right-clicking the item. Users can perform this function on multiple Jump Items as well.

This feature enables admins and users to effectively manage different policies for Jump Items and Jump Clients without the need to create a new Jump Item. This functionality enables users to limit the number of clients necessary to enable Jump Client sessions, and limits manual administrative tasks when defining access pathways for users.

Jump Client Properties

Organize and manage existing Jump Items by selecting one or more Jump Items and clicking **Properties**.

Enter a **Name** for the Jump Item. This name identifies the item in the session tabs. This string has a maximum of 128 characters.

Change a Jump Client's mode from the **Connection Type** dropdown. Active Jump Clients send statistics to the B Series Appliance on a defined interval. Passive Jump Clients send statistics to the B Series Appliance once a day or upon a manual check in. Based on the options your administrator sets, these statistics can include the remote computer's logged-in console user, operating system, uptime, CPU, disk usage, and a screen shot from the last update.

If **Starts Quietly** is checked, the customer client does not take focus and remains minimized in the taskbar or dock when a session is started.

🕠 Edit Jump Client			
Please use the fields below to modify	y the existing Jump Client.		
Name:	Defend01		
Connection Type:	Active		
Starts Quietly:			
Jump Group:	A TechCom		
Tag:			
Public Portal:	Techcom Cloud Site:	_	•
Comments:			
Jump Policy:	None		•
Customer Present Session Policy:	None		•
Customer Not Present Session Policy:	None		•
Reset	1	OK	Cancel

Move Jump Items from one Jump Group to another using the **Jump Group** dropdown. The ability to move Jump Items to or from different Jump Groups depends upon your account permissions.

Further organize Jump Items by entering the name of a new or existing **Tag**. Even though the selected Jump Items are grouped together under the tag, they are still listed under the Jump Group in which each is pinned. To move a Jump Item back into its top-level Jump Group, leave this field blank.

Select the **Public Portal** through which this Jump Item should connect. If a session policy is assigned to this public portal, that policy may affect the permissions allowed in sessions started through this Jump Item. The ability to set the public portal depends on your account permissions.

Jump Items include a **Comments** field for a name or description, which makes sorting, searching, and identifying Jump Items faster and easier.

To set when users are allowed to access this Jump Item, choose a **Jump Policy**. These policies are configured by your administrator in the **/login** interface.

Choose a **Session Policy** to assign to this Jump Item. The session policy assigned to this Jump Item has the highest priority when setting session permissions. The ability to set a session policy depends on your account permissions.

Choose session policies to assign to this Jump Item. Session policies assigned to this Jump Item have the highest priority when setting session permissions. The **Customer Present Session Policy** applies when the end user is determined to be present. Otherwise, the **Customer Not Present Session Policy** applies.

The way customer presence is determined is set by the **Use screen state to detect Customer Presence** Jump Item setting in the /login interface. When enabled, a customer is considered present only if a user is logged in, the system is not locked, and a screen saver is not running. When disabled, a customer is considered present if a user is logged in, regardless of the screen state. Customer presence is detected when the Jump Item session starts. The session policy used for the session does not change throughout the session, regardless of any changes in the customer's presence while the session is in progress. The ability to set a session policy depends on your account permissions.

30

When pinning a Jump Client from within a session and customizing its properties beforehand, you also have the option to set when the Jump Client expires. This can be never, at a specific time and date, or after a certain length of time. An expired Jump Client automatically uninstalls from the remote system and is removed from the list in the Jump Client interface.

Name:				
Connection Type:	Active			
Starts Quietly:				
	Never Expires

Public Portal:	Techcom Cloud	Site: techcomcloudp	ra01.qabomgarcloud.com	•
Comments:				
Jump Policy:	None			•
Customer Present Session Policy:	None			•
Customer Not Present Session Policy:				

If you no longer need access to a remote system, select the Jump Client and click the **Remove** button, or right-click the Jump Client and select **Remove** from the menu. You may select multiple Jump Clients to remove them all at the same time.

Note: If the remote user manually uninstalls a Jump Client, the deleted item is either marked as uninstalled or completely removed from the list of Jump Items in the representative console. This setting is available at **/login > Jump > Jump Clients**. If the Jump Client cannot contact the B Series Appliance at the time it is uninstalled, the affected item remains in its offline state. If a Jump Client goes offline and does not reconnect to the B Series Appliance for 180 days, it is automatically uninstalled from the target computer and is removed from the Jump interface.

		Active and Pass	sive Jump Clients

Use Jump Clients to Access Unattended Android Devices

A persistent connection can be established with an Android device by pinning a Jump Client to the device. This provides the ability to have unattended support sessions. You can deploy Jump Clients using either of the methods below.

Note: Bandwidth usage and battery life are minimally affected by establishing a persistent connection.

Note: Persistent connections to an unattended Android device can occur only when the devices have both the BeyondTrust Support Client and BeyondTrust Jump Client App installed from the Google Play Store. For more information, please see Download the BeyondTrust Support Client and BeyondTrust Jump Client Apps at https://www.beyondtrust.com/docs/remote-support/getting-started/customer-client/android/android-download-app.htm.

Pin an Android Jump Client from the Representative Console

1. While in a support session with the Android device, click on the Pin as Jump Client icon.

- 2. After pinning, the Android device appears as a Jump Item in the Jump Item list. If the Pin a Jump Client icon is gray, the Android Jump Client is not installed on the Android device.
- 3. Meanwhile, the BeyondTrust Jump Client app on the device displays the client as pinned, with a date and timestamp.

Note: Options are available for the Jump Client to be disabled if the device relies on battery power or on data to connect. 🕞 Jump 📃 Create 🗸 Export... Q Search Jump Items... × Remove Properties... Create and Use Local Jump Shortcuts

Note: Jumpoint is available for Windows and Linux systems. Jump Clients are needed for remote access to Mac computers. To Jump to a Windows computer without a Jump Client, that computer must have Remote Registry Service enabled (disabled by default in Vista) and must be on a domain. If you need to access remote computers via Jumpoint when no user is available, make sure your account permissions are set either to disable prompting or to default to **Allow**. You cannot Jump to a mobile device, though Jump Technology is available for mobile BeyondTrust consoles.

Note: Linux Jumpoints can only be used for RDP and SSH/Telnet sessions.

To Jump without a pre-installed client, open the **Jump to...** dialog from:

- The Support menu of the representative console
- The Start button at the top of the representative console
- The Jump To button at the top of the representative console
- Or Create a Remote Jump in the web rep console

From the **Jumpoint** dropdown, select the network that hosts the computer you wish to access. Depending on your account permissions, you can Jump to a system on your local network or to a network on which a Jumpoint is installed.

Select the public portal you wish to associate your session with. This lets the system know what customer agreement behavior should occur.

For more information, please see <u>Customer Client: Modify the</u> <u>Invitation Email, Display Options, Connection Options</u> at <u>https://www.beyondtrust.com/docs/remote-support/getting-</u> <u>started/admin/customer-client.htm</u>.

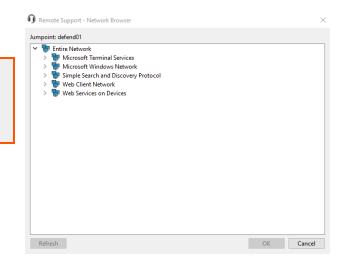

Enter the hostname or IP address of the system you wish to access. Alternatively, if network browsing is enabled from the **/login > Jump > Jumpoint** page, you can click the **[...]** button to browse the directory tree.

Once you have located the computer you wish to access, click Jump.

Remote Support - Jump

This will attempt to start a Jump To session on the remote machine you specify here. You must have Administrator credentials on the remote machine for this to succeed.

Jumpoint:	Local Network			\sim
	Remember as	my preferred choice	е	
Public Portal:	Default:	com		\sim
Hostname / IP:				~
			Jump	Cancel

33

You must provide administrative credentials to the remote computer in order to complete the Jump. The administrative rights must be either a local administrator on the remote system or a domain administrator.

Inter Credentials		×
Please specify administrator credentials for: TB_WKSTNHOST Credential Store

Create and Use Remote and Local Jump Items

Remote Jump enables a privileged user to connect to an unattended remote computer on a network outside of their own network. Remote Jump depends on a Jumpoint.

A Jumpoint acts as a conduit for access to computers on a known remote network. A single Jumpoint installed on a computer within a LAN is used to access multiple systems, eliminating the need to pre-install software on every computer you might need to access.

Local Jump enables a privileged user to connect to an unattended remote computer on their local network. Within the local area network, the BeyondTrust user's computer can initiate a session to a Windows or Linux system directly without using a Jumpoint.

Note: Remote Jump and Local Jump are available only for Windows systems. Jump Clients are needed for remote access to Mac computers. To Jump to a Windows computer without a Jump Client, that computer must have Remote Registry Service enabled (disabled by default in Vista) and must be on a domain.

Create a Remote Jump Shortcut

To create a Remote Jump shortcut, click the **Create** button in the Jump interface. From the dropdown, select **Remote Jump**. Remote Jump shortcuts appear in the Jump interface with Jump Clients and other types of Jump Item shortcuts.

Organize and manage existing Jump Items by selecting one or more Jump Items and clicking Properties.

Note: To view the properties of multiple Jump Items, the items selected must be the same type (e.g., all Jump Clients, all Remote Jumps, etc.). To review properties of other types of Jump Items, please see the appropriate section in this guide.

Enter a **Name** for the Jump Item. This name identifies the item in the session tabs. This string has a maximum of 128 characters.

From the **Jumpoint** dropdown, select the network that hosts the computer you wish to access. The representative console remembers your Jumpoint choice the next time you create this type of Jump Item. Enter the **Hostname** / **IP** of system you wish to access.

Move Jump Items from one Jump Group to another using the **Jump Group** dropdown. The ability to move Jump Items to or from different Jump Groups depends upon your account permissions.

Further organize Jump Items by entering the name of a new or existing **Tag**. Even though the selected Jump Items are grouped together under the tag, they are still listed under the Jump Group in which each is pinned. To move a Jump Item back into its top-level Jump Group, leave this field blank.

Select the **Public Portal** through which this Jump Item should connect. If a session policy is assigned to this public portal, that policy may affect the permissions allowed in sessions started through this Jump Item. The ability to set the public portal depends on your account permissions.

Jump Items include a **Comments** field for a name or description, which makes sorting, searching, and identifying Jump Items faster and easier.

To set when users are allowed to access this Jump Item, choose a **Jump Policy**. These policies are configured by your administrator in the **/login** interface.

Choose a **Session Policy** to assign to this Jump Item. The session policy assigned to this Jump Item has the highest priority when setting session permissions. The ability to set a session policy depends on your account permissions.

Choose session policies to assign to this Jump Item. Session policies assigned to this Jump Item have the highest priority when setting session permissions. The **Customer Present Session Policy** applies when the end user is determined to be present. Otherwise, the **Customer Not Present Session Policy** applies.

The way customer presence is determined is set by the **Use screen state to detect Customer Presence** Jump Item setting in the /login interface. When enabled, a customer is considered present only if a user is logged in, the system is not locked, and a screen saver is not running. When disabled, a customer is considered present if a user is logged in, regardless of the screen state. Customer presence is detected when the Jump Item session starts. The session policy used for the session does not change throughout the session, regardless of any changes in the customer's presence while the session is in progress. The ability to set a session policy depends on your account permissions.

Create a Local Jump Shortcut

To create a Local Jump shortcut, click the **Create** button in the Jump interface. From the dropdown, select **Local Jump**. Local Jump shortcuts appear in the Jump interface with Jump Clients and other types of Jump Item shortcuts.

Organize and manage existing Jump Items by selecting one or more Jump Items and clicking Properties.

Note: To view the properties of multiple Jump Items, the items selected must be the same type (e.g., all Jump Clients, all Remote Jumps, etc.). To review properties of other types of Jump Items, please see the appropriate section in this guide.

Enter a **Name** for the Jump Item. This name identifies the item in the session tabs. This string has a maximum of 128 characters.

Enter the Hostname / IP of the system you wish to access.

Move Jump Items from one Jump Group to another using the **Jump Group** dropdown. The ability to move Jump Items to or from different Jump Groups depends upon your account permissions.

Further organize Jump Items by entering the name of a new or existing **Tag**. Even though the selected Jump Items are grouped together under the tag, they are still listed under the Jump Group in which each is pinned. To move a Jump Item back into its top-level Jump Group, leave this field blank.

Select the Public Portal through which this Jump Item should connect. If a
session policy is assigned to this public portal, that policy may affect the
norminations allowed in accessions started through this Jump Item. The chility t

permissions allowed in sessions started through this Jump Item. The ability to set the public portal depends on your account permissions.

Jump Items include a **Comments** field for a name or description, which makes sorting, searching, and identifying Jump Items faster and easier.

To set when users are allowed to access this Jump Item, choose a **Jump Policy**. These policies are configured by your administrator in the **/login** interface.

Choose a **Session Policy** to assign to this Jump Item. The session policy assigned to this Jump Item has the highest priority when setting session permissions. The ability to set a session policy depends on your account permissions.

Choose session policies to assign to this Jump Item. Session policies assigned to this Jump Item have the highest priority when setting session permissions. The **Customer Present Session Policy** applies when the end user is determined to be present. Otherwise, the **Customer Not Present Session Policy** applies.

The way customer presence is determined is set by the **Use screen state to detect Customer Presence** Jump Item setting in the /login interface. When enabled, a customer is considered present only if a user is logged in, the system is not locked, and a screen saver is not running. When disabled, a customer is considered present if a user is logged in, regardless of the screen state. Customer presence is detected when the Jump Item session starts. The session policy used for the session does not change throughout the session, regardless of any changes in the customer's presence while the session is in progress. The ability to set a session policy depends on your account permissions.

Use a Jump Shortcut

To use a Jump shortcut to start a session, select the shortcut from the Jump interface and click the Jump button.

You must provide administrative credentials to the remote computer in order to complete the Jump. The administrative rights must be either a local administrator on the remote system or a domain administrator.

Inter Credentials	×
Please specify administrator credentials for: TB_WKSTNHOST Credential Store 	
Q	X ×

The client files are pushed to the remote system, and a session attempts to start. Depending on the session permissions, the end-user may be prompted to accept or deny the session. If no response is received within a defined interval of time, the session either starts or cancels, again depending on the session permissions.

Note: If you need to access systems through a Jumpoint when no user is available, make sure the public portal permissions and your account permissions are set either to disable prompting or to default to **Allow**.

Use Local RDP for Access to Windows and Linux Systems

Use BeyondTrust to start a Local Remote Desktop Protocol (RDP) session with remote Windows and Linux systems. Unlike a typical BeyondTrust RDP session, Local RDP sessions are not proxied through a Jumpoint, which means that users can Jump only to systems within their local network. To use Local RDP through BeyondTrust, you must have the user account permission **Allowed Jump Methods:** Local RDP via the local network.

- To start a Local RDP session from the representative console, open the Remote Desktop Protocol dialog from either the Support menu or RDP button.
- 2. Choose Local Network for your Jumpoint option.
- Enter the hostname or IP address of the computer you wish to support.
- 4. Provide the username to sign in as.
- 5. Select a domain.
- Select the quality at which to view the remote screen. This cannot be changed during the RDP session.Select the color optimization mode to view the remote screen. If you are going to be primarily sharing video, select Video Optimized; otherwise select between

11. Your remote desktop protocol (RDP) session begins.

Multi-Monitor Support

An option allows you to open a Remote Support connection expanded across all the monitors on the client computer regardless of the client monitor configuration. With this feature, you can fully utilize all the monitors connected to the client computer, therefore being able to adjust screen sizing and scaling during an RDP session across multiple monitors.

Note: If you are using full screen view while using this feature, the remote system is displayed across all of your monitors.

Create and Use RDP Shortcuts

Use BeyondTrust to start a Remote Desktop Protocol (RDP) session with a remote Windows or Linux System. Because RDP sessions are converted to BeyondTrust sessions, users can share or transfer sessions, and sessions can be automatically audited and recorded as your administrator has defined for your site.

To use Local RDP through BeyondTrust, you must be on the same network segment as the target system and must have the user account permission **Allowed Jump Methods: Local RDP**.

To use Remote RDP through BeyondTrust, you must have access to a Jumpoint and must have the user account permissions **Allowed Jump Methods: Remote RDP**.

Create a Local RDP Shortcut

To create a Local Microsoft RDP shortcut, click the **Create** button in the Jump interface. From the dropdown, select **Local RDP**. RDP shortcuts appear in the Jump interface with Jump Clients and other types of Jump Item shortcuts.

Organize and manage existing Jump Items by selecting one or more Jump Items and clicking Properties.

Note: To view the properties of multiple Jump Items, the items selected must be the same type (e.g., all Jump Clients, all Remote Jumps, etc.). To review properties of other types of Jump Items, please see the appropriate section in this guide.

Enter a **Name** for the Jump Item. This name identifies the item in the session tabs. This string has a maximum of 128 characters.

Enter the **Hostname / IP** of the system you wish to access.

Note: By default, the RDP server listens on port 3389, which is therefore the default port BeyondTrust attempts. If the remote RDP server is configured to use a different port, add it after the hostname or IP address in the form of **<hostname>:<port>** or **<ipaddress>:<port>** (for example, 10.10.24.127:40000).

Provide the Username to sign in as, along with the Domain.

Select the **Quality** at which to view the remote screen. This cannot be changed during the RDP session. Select the color optimization mode to view the remote screen. If you are going to be primarily sharing video, select **Video Optimized**; otherwise, select between **Black and White** (uses less bandwidth), **Few Colors**, **More Colors**, or **Full Color** (uses more bandwidth). Both Video Optimized and Full Color modes allow you to view the actual desktop wallpaper.

Your VNC session now begins. Begin screen sharing to view the remote desktop. You can send the **Ctrl-Alt-Del** command, capture a screenshot of the remote desktop, and share clipboard text contents. You also can share, transfer, or record the VNC session, following the normal rules of your user account settings.

Note: Jump Items can be set to allow multiple users to simultaneously access the same Jump Item. If set to **Join Existing Session**, other users are able to join a session already underway. The original owner of the session receives a note indicating another user has joined the session, but is not allowed to deny them access.

For more information on simultaneous Jumps, please see <u>Jump Item Settings</u> at <u>www.beyondtrust.com/docs/remote-</u> support/getting-started/admin/jump-items.htm.

Shell Jump to a Remote Network Device

With Shell Jump, quickly connect to an SSH-enabled or Telnet-enabled network device to use the command line feature on that remote system. For example, run a standardized script across multiple systems to install a needed patch, or troubleshoot a network issue.

To perform a Shell Jump through BeyondTrust, you must have access to a Jumpoint with Shell Jump enabled, and you must have the user account permission **Allowed Jump Methods: Shell Jump**.

To start a Shell Jump session, open the **Shell Jump** dialog from:

- The Support menu of the representative console
- · The Shell Jump button at the top of the representative console
- Or Create a Shell Jump in the web rep console

Your Jumpoint may be configured for provisioned Shell Jump access only.

From the **Jumpoint** dropdown, select the network that hosts the computer you wish to access. If you generally access the same Jumpoint, check **Remember as my preferred choice**. Select the provisioned system you wish to access.

Alternatively, your Jumpoint may be configured for open access or limited access.

From the **Jumpoint** dropdown, select the network that hosts the computer you wish to access. If you generally access the same Jumpoint, check **Remember as my preferred choice**.

To access a provisioned system, check **Use Provisioned** and select the system from the dropdown.

Alternatively, enter the **Hostname / IP** of the system you wish to access. If your Jumpoint is configured for limited access, the remote system must be in the delimited IP address range.

Choose the **Protocol** to use, either **SSH** or **Telnet.Port** automatically switches to the default port for the selected protocol but can be modified to fit your network settings.Select the **Terminal Type**, either **xterm** or **VT100**.

Then click Jump.

If attempting to Shell Jump to an SSH device without a cached host key, you receive an alert that the server's host key is not cached and that there is no guarantee that the server is the computer you think it is.

If you choose **Save Key and Connect**, then the key is cached on the Jumpoint's host system so that future attempts to Shell Jump to this system do not result in this prompt. **Connect Only** starts the session without caching the key, and **Abort** ends the Shell Jump session.

he server's host key is not cached by the SSH client. You have no quarantee that the
rever is the computer you think it is. You can add the key to the SSH client's cache nd connect, connect without adding the key for this session, or abandon the
onnection. The server's rsa2 key fingerprint is: h-rsa 1024 11:b6:84:5d:12:dc:22:b3:53:ff:4e:a6:c2:92:d1
n-rsa 1024 11:00:84:30:1C:0C:2C:92:03:33:07:4e:a0:C2:92:01

48

If you Shell Jump to an SSH device with keyboard interactive MFA enabled, there is a secondary prompt for input.

When you Shell Jump to a remote device, a command shell session immediately starts with that device. If you Shell Jump to a provisioned SSH device with an unencrypted key or with an encrypted key whose password has been cached, you are not prompted for a password. Otherwise, you are required to enter a password. You can then send commands to the remote system.

Create and Use Shell Jump Shortcuts

With Shell Jump, quickly connect to an SSH-enabled or Telnet-enabled network device to use the command line feature on that remote system. For example, run a standardized script across multiple systems to install a needed patch, or troubleshoot a network issue.

Create a Shell Jump Shortcut

To create a Shell Jump shortcut, click the Create button in the Jump interface. From the dropdown, select Shell Jump. Shell Jump shortcuts appear in the Jump interface along with Jump Clients and other types of Jump Item shortcuts.

Note: Shell Jump shortcuts are enabled only if their Jumpoint is configured for open or limited Shell Jump access.

Organize and manage existing Jump Items by selecting one or more Jump Items and clicking Properties.

Note: To view the properties of multiple Jump Items, the items selected must be all the same type (e.g., all Jump Clients, all Remote Jumps, etc.). To review properties of other types of Jump Items, please see the appropriate section in this guide.

Enter a Name for the Jump Item. This name identifies the item in the session tabs. This string has a maximum of 128 characters.

From the Jumpoint dropdown, select the network that hosts the computer you wish to access. The representative console remembers your Jumpoint choice the next time you create this type of Jump Item. Enter the Hostname / IP of system you wish to access.

Choose the Protocol to use, either SSH or Telnet.

Port automatically switches to the default port for the selected protocol but can be modified to fit your network settings.

Enter the Username to sign in as.

Select the Terminal Type, either xterm or VT100.

You can also select to Send Keep-Alive Packets to keep idle sessions from ending. Enter the number of seconds to wait between each packet send.

Move Jump Items from one Jump Group to another using the Jump Group dropdown. The ability to move Jump Items to or from different Jump Groups depends upon your account permissions.

Further organize Jump Items by entering the name of a new or existing

Tag. Even though the selected Jump Items are grouped together under the tag, they are still listed under the Jump Group in which each is pinned. To move a Jump Item back into its top-level Jump Group, leave this field blank.

Select the Public Portal through which this Jump Item should connect. If a session policy is assigned to this public portal, that policy may affect the permissions allowed in sessions started through this Jump Item. The ability to set the public portal depends on your account permissions.

Jump Items include a Comments field for a name or description, which makes sorting, searching, and identifying Jump Items faster and easier.

49

To set when users are allowed to access this Jump Item, choose a **Jump Policy**. These policies are configured by your administrator in the **/login** interface.

Choose a **Session Policy** to assign to this Jump Item. The session policy assigned to this Jump Item has the highest priority when setting session permissions. The ability to set a session policy depends on your account permissions.

Use a Shell Jump Shortcut

To use a Jump shortcut to start a session, select the shortcut from the Jump interface and click the **Jump** button.

If attempting to Shell Jump to an SSH device without a cached host key, you receive an alert that the server's host key is not cached and that there is no guarantee that the server is the computer you think it is.

If you choose **Save Key and Connect**, then the key is cached on the Jumpoint's host system so that future attempts to Shell Jump to this system do not result in this prompt. **Connect Only** starts the session without caching the key, and **Abort** ends the Shell Jump session.

If you Shell Jump to an SSH device with keyboard interactive MFA enabled, there is a secondary prompt for input.

When you Shell Jump to a remote device, a command shell session immediately starts with that device. If you Shell Jump to a provisioned SSH device with an unencrypted key or with an encrypted key whose password has been cached, you are not prompted for a password. Otherwise, you are required to enter a password. You can then send commands to the remote system.

Support Intel[®] vPro Windows Systems

Using Intel[®] Active Management Technology, privileged users can support fully provisioned Intel vPro Windows systems below the OS level, regardless of the status or power state of these remote systems. To use Intel vPro, you must have access to a Jumpoint with Intel vPro enabled and must have the user account permission **Allowed Jump Methods: Intel[®] vPro**.

Note: Remote systems using vPro with AMT version 5 or higher may be supported with BeyondTrust.
Note: While vPro is supported by clustered Jumpoints, configuration options are available only to standalone Jumpoints.

To start a session with an Intel vPro system, open the **Intel[®] vPro** dialog from:

Clustered Jumpoints have no configuration options for Intel vPro.

- The Support menu of the representative console
- The Intel[®] vPro button at the top of the representative console

From the **Jumpoint** dropdown, select the network that hosts the computer you wish to access. If you generally access the same Jumpoint, check **Remember as my preferred choice**. Enter the **Hostname / IP** of the system you wish to access.

Click Jump.

Depending on your Jumpoint setup, you might be prompted to enter a username and password.

The Jumpoint detects the provisioned vPro hardware. If the credentials, provided during either the Jumpoint configuration or the Jump attempt, match the credentials of the vPro-provisioned system, the connection is initiated.

Depending on how the vPro computer is provisioned, you might be prompted to enter a user consent code before performing certain actions.

Remote Support - Intel [®] vPro	×
This action requires the customer's consent.	
To continue, please ask the customer for the code being shown on their screen and provide it here.

vPro Session Tools

Ç	Reset the vPro connection.
_	Power off or power on the host machine. You may also reboot the host machine normally, to BIOS, to PXE, or to a selected disk image.
5	Select an ISO or IMG file to mount on the remote system. File location is set during Jumpoint configuration.
	Start or stop viewing the remote system's display using KVM.
DCA	Send Ctrl-Alt-Delete to the remote computer.
-	While screen sharing, capture a screenshot of the remote screen or screens at their full resolution, saved in PNG format. Save the image file to your local system or to your clipboard. The capture action is recorded in the chat log with a link to a locally saved image. The link remains active even after the customer has left the session, but it does not persist in the BeyondTrust session report. You can adjust the directory where screenshots are saved by going to the File > Settings > Support Tools menu in the representative console. This feature works on Mac, Windows, and Linux.
	Select an alternate remote monitor to display. The primary monitor is designated by a P .
← →	View the remote screen at actual or scaled size.
N	Select the color optimization mode to view the remote screen. If you are going to be primarily sharing video, select Video Optimized; otherwise select between Black and White (uses less bandwidth), Few Colors, More Colors, or Full Color (uses more bandwidth). Both Video Optimized and Full Color modes allow you to view the actual desktop wallpaper.
<u> </u>	View the remote desktop in full screen mode or return to the interface view.

From the **Reboot** menu, select **Reboot** and **Enter BIOS** to start the BIOS boot process on the remote vPro system. You will then have access to the BIOS for troubleshooting purposes.

Select **Reboot Using PXE** to boot the remote system using a network interface independently of data storage devices or installed operating systems.

Support Session Overview and Tools

SALES: www.beyondtrust.com/contact SUPPORT: www.beyondtrust.com/support DOCUMENTATION: www.beyondtrust.com/docs

Session Tools

		Click the menu icon at the top left of the session window to open session controls for your session. You can also right-click the session tab to see session controls.
		Several of these controls have dedicated icons elsewhere in the interface and are described below (Elevate, Transfer, Invite, Remove Participant, Deploy Support Button, Deploy Jump Client, Custom Links, Close).
		From the menu, select Detach Session Tab to separate the session from the console, or click the session tab and drag it away from the main window. The menu icon remains with your session even if you detach the session tab, allowing you to position the session tab anywhere, such as on a separate monitor, and retain session tool access. Reattach the session using the Attach Session Tab selection in the menu, or simply by clicking the X to close the detached window.
		Additionally, from the menu, select Locate Sidebar to find the sidebar for the session, which can be helpful if you have several detached session sidebars (see below) scattered on your screen.
		You can also rename the session or revert the name to the default.
>	Ŧ	Collapse the sidebar to maximize your session workspace. To pin the sidebar again, hover over the collapsed sidebar arrow and click the Pin Sidebar icon.
6		Click this icon to detach the sidebar. Once detached, the sidebar can be positioned anywhere on your desktop or placed on a separate monitor. The sidebar also can be resized according to your needs, or resize the panes in the sidebar for more viewing space. Click on the Attach Sidebar icon to reattach the sidebar. When the sidebar is detached, the Home icon is enabled (see below).
	•	This Home icon is enabled whenever the sidebar is detached. In the case where you might have several sessions going on at the same time and several detached sidebars on your screen, clicking on a sidebar's Home icon brings up the associated session, saving time and avoiding confusion when trying to identify which sidebar goes with which session.
÷	n	It is possible to reposition the different widget sections displayed on the sidebar, like the chat window, the session info pane, etc. When hovering over the title bar of a section, the cursor turns into a closed hand, allowing you to drag and reposition that section on the sidebar.
_	Ų	Elevate a click-to-chat session to the full customer client, or elevate the customer client to have administrative rights by clicking the shield button. Select Prompt Customer to request admin credentials from the remote user. If you possess administrative credentials to the remote computer, select Specific User to supply an administrative username and password, yourself.
		Elevating the customer client enables switching user accounts, deploying Jump Clients in service mode, and controlling protected windows and UAC dialog boxes. Elevation does not change the user context of the active user and is not the same as logging out the active user and logging back in as an administrator.
		Elevation to admin rights is currently available only for Windows and Mac computers. Administrators can set the customer client to automatically request elevation at session initiation on Windows systems.
		Should you decide someone else is better suited to handle a session, transfer control of that session to another team or user. Remain as a participant or close your tab to leave the session with its new owner. Once you have transferred the session to a new owner, your Transfer , Share , and Remove icons become gray, and you are no longer able to perform these actions, as you are no longer the session owner. The session persists until the new owner of the session closes the session.

SALES: www.beyondtrust.com/contact SUPPORT: www.beyondtrust.com/support DOCUMENTATION: www.beyondtrust.com/docs

BeyondTrust

59

	Invite another user to participate in a shared session. You maintain ownership of the session but can receive input from one or more teammates or an external user. You can also request an access sponsor to perform certain actions on your behalf.
	The session owner can remove another user from a shared session. Additionally, you can disconnect the customer but remain in the session tab to add notes or review the last captured system information.
1	If permitted, install a Support Button on the remote desktop or remove a previously installed Support Button. The customer can click the Support Button to start a support session quickly and easily.
* I	If permitted, install a Jump Client on the remote computer, enabling you or your teammates to access that system later without end-user initiation. Uninstall the client if you no longer need unattended access to that system. To set details, including password, comments, group, and so forth, select Customize .
ß	Open a web browser on your computer to any sites defined by your administrator. This button can be configured to include detailed information about the session, the end customer, and/or the BeyondTrust user who is opening the custom link. If, for instance, the external key matches the unique identifier of a case in your customer relationship management system, clicking this button could pull up the associated case in the external system.
Щ.	When a compatible iOS device is detected, the Special Actions icon appears, allowing the representative to push iOS screen sharing instructions to the device.
×	Close your session tab entirely. If you have ownership of the session, you can either uninstall the customer client from the remote machine or leave the customer in queue for another representative to resume the session. You can close the session from the sidebar, the session menu, or the session tab.

At the bottom right of the session window is information about the remote system along with any other information the customer may have provided in the issue submission form. This can include the following:

- **Type**: The session type.
- **Priority**: The priority level (Low, Medium (default), or High) of the request, depending on the support issues defined by your BeyondTrust administrator.
- Queue: The Personal queue of the representative who owns the session.
- Session Status: Waiting (no rep has joined), In Progress (rep and customer have joined), or Customer Absent (rep has joined but customer has left).
- **Customer Name**: This is either the name entered by the customer when starting the session, the username of the logged-in user, the hostname of the customer machine (for pushed and pinned sessions), or service (for elevated sessions).
- Computer Name: The hostname of the customer's machine as reported in System Settings.
- Platform: The operating system of the customer's machine
- Support Issue: If an issue was selected, this reports the name of the issue the customer selected.
- Time in the System: This tracks the amount of time from the moment the session entered its first queue.
- Public Site: Typically, this is listed as Default; however, if non-default sites are present, other sites may be available.
- **Required Skills**: Skills associated with the specific issue selected by the customer. Skills are created and associated with issues by the BeyondTrust administrator from the BeyondTrust /login interface.
- IP Address: The public and/or private IP address of the customer's local system.

If your administrator has enabled the XML API, you may designate an external key for use in session reports. Any custom session attributes enabled by your administrator will appear in a **Custom Info** tab. Click **Copy** to copy all information to your clipboard.

Another option that your administrator may choose to enable is the ability to log out the Windows user automatically or lock the remote computer when the session closes. When you have been working on an unattended system, for example, locking the computer is recommended to prevent unauthorized users from viewing private information. Set the action to take from the dropdown at the bottom of the pane.

Log in to Remote Systems Using Credential Injection from the Representative Console

When accessing a Windows-based Jump Item in the Representative Console, you can use credentials from a credential store to log in to the endpoint or to run applications as an admin.

Before using credential injection, make sure that you have a credential store or password vault available to connect to BeyondTrust Remote Support.

1

Note: This feature is not supported for ARM-based Windows systems.

Install and Configure the Endpoint Credential Manager

Before you can begin accessing Jump Items using credential injection, you must download, install, and configure the BeyondTrust Endpoint Credential Manager (ECM). The BeyondTrust ECM allows you to quickly configure your connection to a credential store, such as a password vault.

Note: The ECM must be installed on your system to enable the BeyondTrust ECM Service and to use credential injection in BeyondTrust Remote Support.

System Requirements

- Windows Vista or newer, 64-bit only
- .NET 4.5 or newer
- Processor: 2GHz or faster
- Memory: 2GB or greater
- Available Disk Space: 80GB or greater
- 1. To begin, download the BeyondTrust Endpoint Credential Manager (ECM) from <u>BeyondTrust Support</u> at https://www.beyondtrust.com/docs/index.htm#support. Start the BeyondTrust Endpoint Credential Manager Setup Wizard.

2. Agree to the EULA terms and conditions. Mark the checkbox if you agree, and click **Install**. If you wish to modify the installation path, click the **Options** button to customize the installation location.

1

Note: You are not allowed to proceed with the installation unless you agree to the EULA.

- 3. Choose a location for the Credential Manager and click Next.
- 4. On the next screen, you can begin the installation or review any previous step.

记 Beyond Trust Endpoint Credential Manager Setup - 🗆 🗙

Click Install to begin the installation. Click Back to review or change any of your installation settings. Click Cancel to exit the wizard.

62

5. Click Install when you are ready to begin.

6. The installation will take a few moments. On the screen, click **Finish**.

Configure a Connection to Your Credential Store

Using the ECM Configurator, set up a connection to your credential store.

- Locate the BeyondTrust ECM Configurator you just installed using the Windows Search entry field or by viewing your Start menu programs list.
- 2. Run the program to begin establishing a connection.

🚷 BeyondTrust-ECMConfigurator.exe	7/23/2019 2:35 PM	Application	317 KB

63

SALES: www.beyondtrust.com/contact SUPPORT: www.beyondtrust.com/support DOCUMENTATION: www.beyondtrust.com/docs

3. When the ECM Configurator opens, complete the fields. All fields are required.

Enter the following values:

Field Label	Value	
Client ID	The Admin ID for your credential store.	
Client Secret	The Admin secret key for your credential store.	
Site	The URL for your credential store instance.	
Port	The server port through which the ECM connects to your site.	
Plugin	Click the Choose Plugin button to locate the plugin.	

4. When you click the Choose Plugin... button, the ECM location folder opens.

5. Paste your plugin files into the folder.

6. Open the plugin file to begin loading.

Note: If you are connecting to a password vault, more configuration at the plugin level may be needed. Plugin requirements vary based on the credential store that is being connected.

IMPORTANT!

To apply new settings in the configuration, restart the ECM service.

SALES: www.beyondtrust.com/contact SUPPORT: www.beyondtrust.com/support DOCUMENTATION: www.beyondtrust.com/docs

Use Credential Injection to Access Remote Systems

After the credential store has been configured and a connection established, the representative console can begin using credentials in the credential store to log in to remote systems.

- 1. Log in to the representative console.
- 2. Jump to a remote system with a Jump Item installed as an elevated service on a Windows machine.
- Click the Play button to begin screen sharing with the remote system. If the remote system is at the Windows login screen, the Inject Credentials button is highlighted.
- 4. Click the **Inject Credentials** button. A pop-up credential selection dialog appears, listing the credentials available from the ECM.
- Select the appropriate credentials to use from the ECM. The system retrieves the credentials from the ECM and injects them into the Windows login screen.
- 6. The representative is logged in to the remote system.

Choose from Favorite Credentials for Injection

After you have used a set of credentials to log into an endpoint, the system stores your preferred credentials for the endpoint and the context in which they were used (to log in, to perform a special action, to elevate, or to push) in the B Series Appliance database. The next time you use a credential to access the same endpoint, the credential injection menu makes a recommendation for which credentials to use. The credentials are displayed at the top of the credentials list, under **Recommended Accounts**, followed by any remaining credentials. If no credential history exists for an endpoint, the B Series Appliance displays all possible credentials, grouped by accounts that are associated with the Jump Item and not associated with the Jump Item. Jump Item associations for accounts and account groups are configured in /login.

The credential list recommends no more than five credentials.

Note: When using BeyondTrust Vault, the maximum number of credentials that can display in the dropdown menu is 2,000. When using the ECM, the limit is 200.

Check Out and Check In Vault Credentials

You can easily access the Remote Support Vault directly from the representative console. This allows you to check out and check in credentials when needed, either during a session or on your local machine.

🕠 Bey	ondTrust Rem	note Support Repr	esentative Console

Chat with the Customer During a Session

Throughout the support session, you can chat with your remote customer. You do not need to have screen sharing permissions before beginning a chat session. If enabled in the representative console settings, you receive pop-up notifications when chat messages are received. If you have uploaded your photo or any avatar image, it displays on the customer's chat window once the chat begins.

Click the arrow icon at the top left of the sidebar to collapse the sliding sidebar. If the sidebar is collapsed, hover over the arrow by the hidden window to reveal it. Click the pin icon that replaces the arrow icon at the top left of the sidebar to re-pin the sliding sidebar.

When typing in English, misspelled words are underlined in red. Right-click to view spelling suggestions or to ignore that spelling for the current console login.

Use Real-time Chat Translation

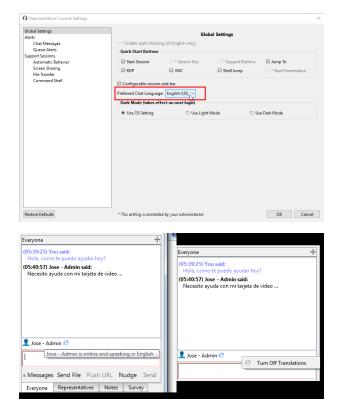

If real-time chat translation is enabled, customers can chat with a representative in their own language. As an example, a customer whose main language is English can chat with a representative who speaks only Dutch, with the chat traffic being automatically translated in real time.

Enable Real-Time Chat Translations in the Representative Console

Once real-time chat translation is enabled, representatives can select their preferred chat language by following these steps:

- 1. Download and install the updated representative console.
- 2. Log in and click File > Settings.
- 3. Under **Global Settings**, select the **Preferred Chat Language** from the dropdown list.

67

Hovering the mouse pointer over the representative's name shows which language is being used to translate the messages sent to the customer. In the example shown, the representative is shown as *online and speaking in English*, even though the representative is typing in Spanish.

You can turn off translations by right-clicking the translation icon, and then clicking **Turn Off Translations**. To turn translations back on, right-click the icon and click **Turn Translations On**. It is not possible for the customer to turn the translation process off on their own.

*

Note: BeyondTrust's Remote Support real-time translation chat supports German, Spanish (Latin American), Spanish (European), Finnish, French, Italian, Japanese, Dutch, Polish, Portuguese (Brazil), Portuguese (Portugal), Russian, Swedish, Turkish, Chinese, and Simplified Chinese.

Tip: It is possible to use a language in a session chat that is not supported by BeyondTrust but is supported by GeoFluent or AWS Amazon Translate. For more information, please see <u>Real-Time Chat: Translate Chat Messages Between Rep and</u> Customer at https://www.beyondtrust.com/docs/remote-support/getting-started/admin/real-time-chat.htm.

Use Canned Messages

If your administrator has configured canned messages, you can on the **Messages** button at the lower left of the chat input area to insert previously written messages into the chat. Click the arrow to the left of a category name to see its messages and subcategories. Type in the search box to find a specific message.

Messages appear as plain text in the chat input area. You can add or edit BBCode tags within a message to add text formatting. Formatting is applied when the message is sent.

Use Other Session Options

To push a file through the chat interface, click the **Send File** button. Pushing a URL through the chat interface automatically opens a browser on the remote system and directs it to the designated site. In order to push a URL, the web address must be the only text in the field.

To attract the attention of your customer, click **Nudge**. This gives focus to the customer client, jiggles the customer client, and plays an audible alert on the remote system. The nudge is logged in the chat history. After sending a nudge, you must wait several seconds before you can send another nudge.

The chat window records not only the messages and the time they are sent; it also serves as a running log of everything that happens throughout the session, including files transferred and permissions granted.

If one or more representatives are sharing the session, you can choose to chat with all participants or to chat privately with only the other representatives. When an additional user joins a shared session, they are able to see the entire chat history.

You can also add notes about the session. If the session is shared or transferred, these notes can be submitted by one representative and pulled by another for a quick, private review of the situation. These notes are also available in the session report. Notes can be added both during the session and also after the remote connection has been terminated.

The necessary software has been uploaded, but while it's installing, Alfred won't be able to work. I've installed a Jump Client and will finish the process once Alfred has left the office	T.S. Eliot 03/22/201	L5 16:16:52 PM			
Add	installing, Alfr	ed won't be able to w	ork. I've in	stalled a Jur	np
	Add			R	efresh

68

Your administrator may also choose to allow you access to the representative survey during a session. In this scenario, the survey can be used as a workflow template, allowing your administrator to push a series of questions and/or check mark points, as well as specific links you may use in your support session.

Note: It is possible to reposition the different widget sections displayed on the sidebar, like the chat window, the session info pane, etc. When hovering over the title bar of a section, the cursor turns into a closed hand, allowing you to drag and reposition that section on the sidebar.

Elevate the Client

Elevating the customer client enables switching user accounts, deploying Jump Clients in service mode, and controlling protected windows and UAC dialog boxes. Elevation does not change the user context of the active user and is not the same as logging out the active user and logging back in as an administrator. Once you have elevated a session, you can log out of the existing user and back in with an administrative account, or use **Run as administrator** to run commands or programs within the admin user context.

Elevation

To elevate the customer client to have administrative privileges, click the **Elevate** button at the top of the session window.

_	~	۰.	-	_

i.

A prompt for administrative credentials appears. A prompt to elevate will also appear if the representative attempts to perform an action which requires administrative rights in an non elevated session.

You may also configure settings in the representative console so that the user at the remote device is automatically prompted if their secure desktop is enabled. This setting can be found by navigating to File > Settings > Support Sessions > Automatic Behavior. This setting can also be globally configured in the /login interface on the Rep Console > Rep Console Settings page under Manage Rep Console Settings.

Global Settings	Automatic Behavior	
Alerts		
Chat Messages	Automatically request screen sharing	
Queue Alerts	Automatically detach	
Support Sessions	Prompt to elevate if customer's secure desktop is enabled	
Automatic Behavior		
Support Tools		

For more information on elevation, please see the following articles:

Screen Share with the Remote Customer for View and Control

From the session window, click the **Screen Sharing** button to request control of the remote computer. Options may be available below the button depending on your account settings. Click the gear button to view options.

Screen Sharing Options

- Leaving all options unchecked requests full screen sharing, which grants view and control of the remote system's entire desktop and all applications.
- If you check **Full Access**, available only in a customer-initiated session, you will request both screen sharing and all other privileges at once.
- If you check View Only, you may see but not control the remote screen.
- **Privacy Screen**, available only when Jumping, starts the session with the remote customer's view and control of the system disabled. Privacy screen is not available when supporting Windows 8.
- Customer Chooses Shared Applications, available only when supporting a Windows or Mac computer, allows the customer to limit which applications to share.

If your administrator has set your account to require that the customer select which applications to share, you will only be allowed to request limited screen sharing. Alternatively, you may only be allowed to request full screen sharing, or you may be allowed to choose which level of access to request.

Note: A site-wide setting may allow your customer to limit applications after beginning screen sharing, regardless of the level of access requested.

For macOS Catalina (10.15)+ systems, if remote control is not enabled, click the banner at the top of the **Screen Sharing** tab to prompt the user for permissions.

72

REMOTE SUPPORT 23.3 REPRESENTATIVE GUIDE

BeyondTrust

The customer can now grant access when prompted in the customer client, and the representative is directed to the correct panes in **Settings** to update the permissions.

Once the customer has granted permission, the enabled applications of the remote desktop appear in your window. Your customer can choose to grant you view-only access or, if your permissions allow, full mouse and keyboard control, enabling you to work on the remote computer as if you were really there. You can request to elevate your permission level at any time during the session.

In a click-to-chat session, you can only chat with the customer and see basic session information. If you need to provide deeper support, request to elevate the session to the full customer client.

depository institution. It is not authorized to accept deposits or trust accounts and is not licensed or regulated by any state or federal banking authority.

Screen Sharing Tools

BeyondTrust

B

5	Stop screen sharing.
	While viewing the remote computer, start or stop control of the remote keyboard and mouse.
	Representatives using a macOS system can send CTRL+Left-Click through the connected screen sharing session to the remote system by using CTRL+CMD+Left-Click.
.	If your permissions allow, you can disable the remote user's screen view and mouse and keyboard input. The customer's view of the privacy screen clearly explains that the representative has disabled the customer's view. The customer can regain control at any time by pressing Ctrl+Alt+Del .
	Alternatively, disable the customer's mouse and keyboard input while still allowing them to view the screen. When input is restricted, an orange border appears around the customer's monitors, and a message indicates that the representative has mouse and keyboard control. The customer can regain control at any time by pressing Ctrl+Alt+Del .
	Restricted customer interaction is available only when supporting macOS or Windows computers. In Windows Vista and above, the customer client must be elevated. On Windows 8, privacy screen is not available, and the representative can only disable the mouse and keyboard.
Ţ	Annotation tools enable you to guide customers through more complex tasks and to train remote employees, reducing the number of call-backs and lowering training costs. A number of tools are available, including shapes and free drawing. BeyondTrust InSight allows annotations on the a live camera feed from an Android or iOS device. Note that annotations have special requirements for certain mobile platforms. To learn more about BeyondTrust InSight, please see BeyondTrust InSight for iOS or BeyondTrust InSight for iOS or BeyondTrust InSight for Android.
_0	Reboot the remote system in either normal or safe mode with networking, or shut down the remote system. You can also request the end user to enter valid credentials so that after a reboot the representative can log back on with the provided credentials without requiring the customer to be present. For further details, see <u>"Automatic Log On Credentials: Reboot and Reconnect" on page 123</u> .
CA	Send a Ctrl-Alt-Del command to the remote computer.
I.	Perform a special action on the remote system. Based on remote operating system and configuration, available tasks will vary. When operating in elevated mode, some actions can be run in System context. Alternatively, provide an administrative user's credentials to perform a special action in that user context. Canned scripts available to the user appear in a fly-out menu.
	Access a dropdown of available smart card readers on your local system. Use the virtual smart card to perform administrative actions, running programs in another user context or even logging in as another user. To use smart card credentials on a remote system, you must start the session using an elevated Jump Client, a Jumpoint, or a local network Jump. The appropriate virtual smart card drivers must be installed on both your local system and the remote system, with their services running.
	Begin iOS device screen sharing. For details, see <u>Supporting Apple iOS Devices</u> at <u>www.beyondtrust.com/docs/remote-support/getting-started/customer-client/apple-ios/index.htm</u> . When supporting an Apple OS X 10.10+ system attached to an Apple iOS 8.0.1+ mobile device, click this button to begin or end view-only screen sharing on the attached iOS device. Note that this button is not visible unless you are in a standard screen sharing support session with an Apple OS X Yosemite system, and that the button is not enabled unless an Apple iOS 8.0.1+ device is connected to the OS X Yosemite system being supported.

BeyondTrust

-	While screen sharing, capture a screenshot of the remote screen or screens at their full resolution, saved in PNG format. Save the image file to your local system or to your clipboard. The capture action is recorded in the chat log with a link to a locally saved image. The link remains active even after the customer has left the session, but it does not persist in the BeyondTrust session report. You can adjust the directory where screenshots are saved by going to the File > Settings > Support Tools menu in the representative console. This feature works on Mac, Windows, and Linux.
	Manually send the contents of your clipboard to the remote computer. This tool icon is not visible if you are permitted to automatically send the contents of your clipboard or if you are disallowed to send clipboard information to the remote system.
	Manually receive the contents of your clipboard from the remote computer. This tool icon is not visible if you are permitted to automatically receive the contents of your clipboard or if you are disallowed to receive clipboard information from the remote system.
	Select an alternate remote monitor to display. The primary monitor is designated by a P .
← →	View the remote screen at actual or scaled size.
1	Select the color optimization mode to view the remote screen. If you are going to be primarily sharing video, select Video Optimized; otherwise select between Black and White (uses less bandwidth), Few Colors, More Colors, or Full Color (uses more bandwidth). Both Video Optimized and Full Color modes allow you to view the actual desktop wallpaper.
1	View the remote desktop in full screen mode or return to the interface view. When in full screen mode, special keys are passed through to the remote system. This includes but is not limited to modifier keys, function keys, and the Windows Start key. Note that this does not apply to the Ctrl-Alt-Del command.

depository institution. It is not authorized to accept deposits or trust accounts and is not licensed or regulated by any state or federal banking authority.

Use Annotations to Draw on the Remote Screen

Use annotation tools to guide customers through complex tasks and to train remote employees, reducing the number of call-backs and lowering training costs. Representatives are offered an interactive way of dealing with customers, reducing potentially frustrating situations and increasing customer satisfaction.

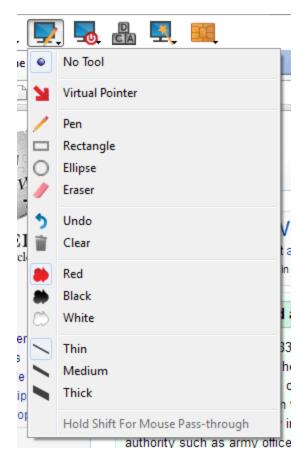

While in annotation mode you can still use your mouse to move or control items on the remote desktop. Holding down the **Shift** key temporarily suspends annotation mode.

Enabling Annotations

To start using Annotations, click on its icon.

Clicking on any of the dropdown menu items turns the **Annotations** mode on. You can select from a number of tools to help you guide a customer through a series of steps, or to enhance a training session. The following tools and functions are available:

- Virtual Pointer
- Pen
- · Rectangle drawing tool
- Ellipse drawing tool
- Eraser
- Undo
- Clear
- Red, Black, or White colors
- Thin, Medium, or Thick line

76

BeyondTrust

Ť

77

You can select your tool from the **Annotations** dropdown menu or by rightclicking inside the remote screen area. If you click on the areas outside of the remote screen, the dropdown menu does not display.

Annotations appear on the remote screen to draw attention to specific points of interest or highlight areas as needed.

To turn off **Annotations**, select **No Tool** from the dropdown menu, or click **Esc.**

All annotations are deleted from the customer's screen when the session terminates.

Annotations are also available during presentations. For more information, please see <u>"Give a Presentation to Remote</u> <u>Attendees" on page 92</u>.

SALES: www.beyondtrust.com/contact SUPPORT: www.beyondtrust.com/support DOCUMENTATION: www.beyondtrust.com/docs

View Multiple Monitors on the Remote System

BeyondTrust supports remote desktops configured to use multiple monitors. When you first connect to a remote desktop, you will see the primary monitor in the **Screen Sharing** tab. If additional monitors are configured, a **Display** icon will appear active in the **Screen Sharing** toolbar, and a **Displays** tab will appear in the bottom right corner of the console.

Using the Display Icon

Select the **Display** icon to see all the displays attached to the remote computer. In this view, the remote monitors are represented by rectangles rather than thumbnail images. The position of each rectangle corresponds to the position configured for each monitor on the remote desktop.

The primary monitor appears in the **Screen Sharing** window by default. To change your view, click on the rectangle that represents the monitor you wish to see. You can also select **View All** to show all the displays attached to the remote computer in the **Screen Sharing** window.

78

If the remote computer has no additional monitors attached, the **Display** icon will be inactive.

RDP Session Multi-Monitor Support

An option allows you to open a Remote Support connection expanded across all the monitors on the client computer regardless of the client monitor configuration. With this feature, you can fully utilize all the monitors connected to the client computer, therefore being able to adjust screen sizing and scaling during an RDP session across multiple monitors.

Note: If you are using full screen view while using this feature, the remote system is displayed across all of your monitors.

Using the Displays Tab

Select the **Displays** tab to see thumbnail images of all the displays attached to the remote computer. The position of each thumbnail image corresponds to the position configured for each display on the remote desktop.

The monitor currently displayed in the **Screen Sharing** tab will be highlighted.

Use this monitor ✓ Span all monitors

The primary monitor appears in the **Screen Sharing** window by default. To change your view, click on the thumbnail of the monitor you wish to see. You can also select **View All** to show all the displays attached to the remote computer in the **Screen Sharing** window.

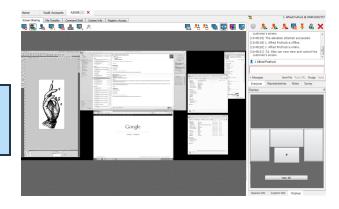

79 : 11/16/2023

BeyondTrust

If the session is in grayscale mode, the remote monitors are represented by rectangles rather than thumbnail images. The position of each rectangle corresponds to the position configured for each monitor on the remote desktop.

Note: The refresh cycle of the thumbnail image is about three seconds in ideal conditions but can lag depending on connection speed and data transfer.

depository institution. It is not authorized to accept deposits or trust accounts and is not licensed or regulated by any state or federal banking authority.

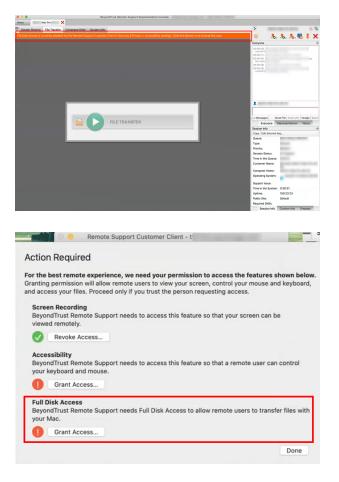

File Transfer to and from the Remote System

During a session, privileged users can transfer, delete, or rename files and even entire directories both to and from the remote computer, or from the remote device and to or from the device SD card. You do not need to have full control of the remote computer in order to transfer files.

Depending upon the permissions your administrator has set for your account, you might be allowed only to upload files to the remote system or to download files to your local computer. File system access might also be restricted to certain paths on the remote or local system, thereby enforcing that uploads or downloads occur only in certain directories.

For macOS Catalina (10.15)+ systems, if screen sharing is not enabled, click the banner at the top of the **File Transfer** tab to prompt the customer for permissions to transfer files.

The customer can now grant access when prompted in the customer client, and the representative is directed to the correct panes in **Settings** to update the permissions.

Transfer files by using the upload and download buttons or by dragging files. Right-clicking on a file brings up a context sensitive menu from where you can, among other things, create a new directory, rename, open, or delete the file, or download it directly to your machine.

83

File Transfer Tools

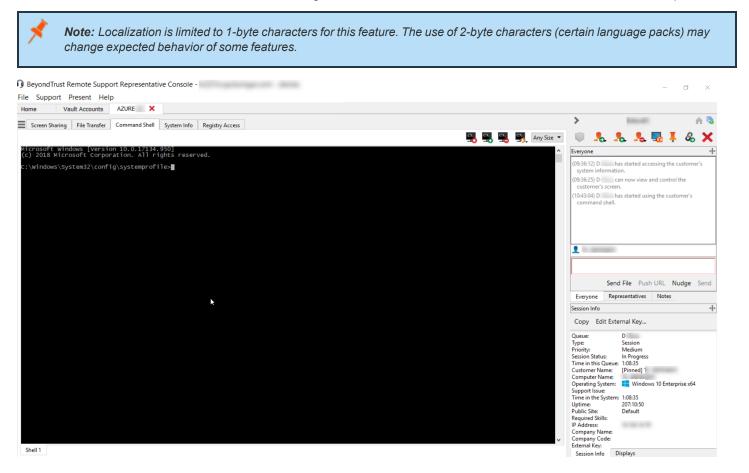

-	Stop access to the remote device's file system when it is no longer needed.
	Go up a directory in the selected file system.
	Refresh your view of the selected file system.
	Create a new directory.
X	Rename a directory or file.
	Delete a directory or file. Note that deleting a file or folder permanently deletes it. It is not sent to the recycle bin.
	Show hidden files.
-	Select one or more files or directories and then click the appropriate button to upload the files to the remote system or download to your local system. You can also drag and drop files to transfer.
Ask 🔻	If a file of the same name already exists in the location to which you are attempting to transfer a file, choose whether to respond by automatically overwriting the existing file, canceling the transfer, or prompting for each file of identical name. Note that if the content of the files is identical, the upload will be skipped and will result in a warning message.
	Preserving file information will keep the file's original timestamp. If this option is disabled, the file's timestamp will reflect the date and time when it was transferred.
	If automatic file transfer is enabled, transfers will begin as soon as the upload or download button is clicked or a file is dragged from one file system to the other.
	If automatic file transfer is not enabled, select from the transfer manager the files you wish to transfer and then click the Start button to begin the transfer.
	From the transfer manager, select a file and then click the Details button to view information such as the date and time of the transfer, the origin and destination of the files, and the number of bytes transferred.
	Select one or more files from the transfer manager and then click Cancel to stop the transfer from completing.
6	Clear all information from the transfer manager.

84

Access the Remote Command Shell

Remote command shell enables a privileged user to open a virtual command line interface to the remote computer. The user can then type locally but have the commands executed on the remote computer. You can work from multiple shells. Note that scripts available to the user may also be executed on the remote computer from the screen sharing interface.

Your administrator can also enable remote shell recording so that a video of each shell can be later viewed from the session report.

SALES: www.beyondtrust.com/contact SUPPORT: www.beyondtrust.com/support DOCUMENTATION: www.beyondtrust.com/docs

Command Shell Tools

	Stop command prompt access when it is no longer needed.
<u> </u>	Open a new shell to run multiple instances of command prompt, or close individual shells without relinquishing command prompt access. Shells are tabulated at the bottom of the screen.
	If permitted, access a dropdown of previously written scripts. When you select a script to run, you will see a prompt with a brief description of the script. When you click Yes , the script will run in the active command shell.
C\ _10	Access tools to use within the command prompt. Paste the contents of your clipboard either by selecting it from the menu or simply by right-clicking in the terminal window. Copy a log of the current shell to your clipboard or save it to your computer. To copy a portion of the text, simply select it. Clear any lines not currently in sight, or clear all content from the terminal. Tools can also be accessed by pressing Ctrl+right-click within the terminal window.
Any Size 🔻	Select the size at which to view the display. Choose from 80x50, 80x25, or any size.

depository institution. It is not authorized to accept deposits or trust accounts and is not licensed or regulated by any state or federal banking authority.

View Remote System Information

Privileged users may view a complete snapshot of the remote device's or computer's system information to reduce the time needed to diagnose and resolve the issue. The system information available varies depending on the remote operating system and configuration. Users with appropriate permissions may also kill processes; may start, stop, pause, resume, and restart services; and may uninstall programs.

Because the large amount of data that can be pulled may result in slow transmission times, you can choose to start your view with only the **Overview** tab or to pull data for all tabs. If you choose to start with **Overview Only**, you can gather data from the other tabs by going to the section you need to view and clicking the **Refresh** button at the top of that section.

Access the Remote Registry Editor

Access a remote Windows registry without requiring screen sharing. While in the virtual registry editor, you can add new keys, delete keys, edit keys, search, and import or export keys. Use of the virtual registry editor without screen sharing causes fewer interruptions to your customer and allows you to resolve issues more quickly.

Show My Screen to the Customer

A privileged representative can share their screen with a customer at any time, aiding effectiveness of support sessions or training.

Privileged representatives begin support sessions with **Screen Sharing** or **Show My Screen** options immediately available. If you are screen sharing, you must stop screen sharing if you wish to begin a Show My Screen session.

The representative console displays a preview of what your customer's viewing experience will be when you make the session live. When you share your screen with your customer during a support session, your customer will be able to see either your entire desktop or only those applications you have chosen to present. You may also choose whether to share new windows automatically. Show or hide the application selector by clicking the arrow at the top of the **Show My Screen** window.

Click the **Present Your Screen to the Customer** icon at the top left of the window to begin your live Show My Screen session. You can continue chatting with your customer throughout the session.

Note: Show My Screen activity is recorded for reporting purposes if so configured in /login > Configuration > Options. The recording is not available to your customer on the post-session landing page.

90

Show My Screen Tools

4	4	Show your entire screen or selected applications to the remote user, or stop showing your screen.
	٩.	While showing your screen, request or stop your customer's control of your keyboard and mouse, as when you are training a customer.
		Note: The Linux customer client does not support control of the representative's screen.
	P	Select the display monitor for your Show My Screen session. The primary monitor will be designated by a P .

Give a Presentation to Remote Attendees

Note: The presentation feature must be enabled when your support site is built. If it is not available and you need to run presentations, please contact Support or your site administrator.

IMPORTANT!

The presentation feature is being deprecated as of Remote Support 22.1 and is not included in new site deployments. For upgrades, it is turned ON, but you can opt to turn it OFF. If you have a new site deployment and you need to run presentations, please contact Support or your site administrator.

A representative with permissions to give presentations, or alternatively a representative with only presentation permission, can share their screen with one or more remote attendees. Start a presentation from:

It Accounts						
	Session Key	Support Buttons	Present -	Jump To	RDP	VNC
ccess Requests			Start Pre	sentation		
		Session Key	Session Key Support Buttons	Session Key Support Buttons Present Coss Requests Start Pre	Session Key Support Buttons Present Jump To Start Presentation	Session Key Support Buttons Present V Jump To RDP

- The Present menu of the representative console
- The Present quick start button at the top of your representative console
- The Presentation-Only interface selection window (representatives without permission to provide remote support)

If you choose to start a presentation immediately by clicking either the **Present** button or by selecting **Start Presentation...** within the representative console, the **Presentation** interface opens.

If you have presentation-only permissions, click **New Presentation** in the Presentation-Only selection window to begin a new presentation now.

Alternatively, schedule a presentation for a later date. A scheduler prompts you to enter a name for your presentation, a start time and date, and the expected duration of the event. Once you have entered this information, click **Create**. Your presentation appears in a list of your upcoming presentations. Presentation times cannot overlap. If you delete a presentation prior to its scheduled time, any invitations you have sent will be invalid, and attendees will not be able to connect. When you are ready to begin a scheduled presentation, select the presentation from the list and then click **Start** to open the presentation interface.

From the scheduler, you can send attendees an email invitation containing a unique URL and any audio conference details for your presentation, or you can direct your attendees to visit your public site and enter the unique session key. You can also send an email invitation from the presentation interface.

If a presentation is scheduled to start soon, a button at the top of the

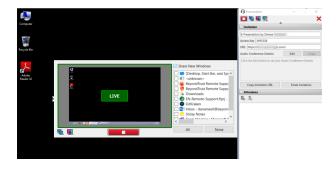

window.

Presentation-Only selection window allows you to begin the presentation directly. You can also start a scheduled presentation from the schedule

Schedule Presentation × Start Time: 03:44:52 PM 🖨 Duration: 30 minutes 🗸 Name: e 9 Sun Mon Tue Wed Thu Fri Sat 29 30 1 2 3 4 6 7 8 9 10 11 13 16 17 18 14 15 19 20 21 22 23 24 25 26 27 28 29 30 5 6 Name Start Duration Session Key Work with Spreadsheets 09/16/2021 03:45:11 PM 30 minute(s) 592913378334 09/16/2021 05:00:11 PM 30 minute(s) 329071283263 Manage a Database Done

The presentation interface consists of an unobtrusive vertical sidebar with three collapsible sections: **Invitation**, **Attendees**, and **Chat**. A sliding, horizontal side panel contains a previewing window that displays a status indicator which changes when you click the start/stop button to indicate that you are presenting live. An application selector, display selector, and resolution selector, described below, are also available.

93

In the **Invitation** section you may enter a name for your presentation if you wish, or you may use the default generic entry including the representative's name. Enabled fields for the presentation's **Access Key** and **URL** are displayed, and you may choose to enter and save audio conference details, which are retained from one presentation to the next, and are logged in the chat window. This information is sent to all attendees when they connect and is redistributed any time you update the information during a presentation. If your public site has the presentation list enabled, you can select **Showing on Public List** to display a link attendees can click to join your presentation. Buttons are provided to quickly and efficiently **Copy Invitation URL** and also to **Email Invitation**.

SALES: www.beyondtrust.com/contact SUPPORT: www.beyondtrust.com/support DOCUMENTATION: www.beyondtrust.com/docs

If the **Invite** button is missing in the presentation schedule dialogue, confirm that client side emails have been configured and enabled on your instance. For more information, please see <u>Email Configuration</u>: <u>Configure the Software to Send Emails</u> at <u>https://www.beyondtrust.com/docs/remote-support/getting-started/admin/email-configuration.htm</u>.

The **Attendees** section lists those attendees who have joined your presentation. A button allows you to grant or discontinue an attendee's control of your mouse and keyboard, if permitted. Also, you may choose to remove attendees from your presentation by clicking the button to remove attendees.

Note: When your attendee has control of your mouse and keyboard, the attendee will see a red bar across the bottom of the attendee window. If the attendee is in actual size or full screen mode, attendee will drop out of those modes when taking control from you. An attendee using a mobile device cannot take control.

The **Chat** section of the presentation interface logs your actions in the interface as well as messages you send to all attendees or to selected attendees. Your attendees may chat with you alone or with everyone.

Clicking the arrow above the presentation interface sections minimizes the interface to mini-mode containing only the presentation controls themselves.

When previewing the presentation or presenting, you can open or close the Preview/Live pane by clicking the handle at its left. From this pane, select which applications to share. You can choose whether to present new windows automatically or not. If you have more than one display for your computer, click the monitors icon to select which monitor to present. The primary monitor is designated by a **P**. You may also choose to present all of your displays.

You can also choose the presentation color depth - low bandwidth, best performance, performance and quality, or best quality.

The start, stop, monitors, and color depth buttons are available whether or not you have the Preview or Live pane open, or whether or not you have collapsed the BeyondTrust Presentation interface to its minimal screen presence, or minimode. The annotations button is also available when you are presenting.

95

SALES: www.beyondtrust.com/contact SUPPORT: www.beyondtrust.com/support DOCUMENTATION: www.beyondtrust.com/docs

Presentation Tools

	Begin presenting. A live presentation will be reflected in the presentation interface pull-out panel with a translucent green LIVE indicator.
	Stop presenting. The presentation interface pull-out panel will display a translucent red PREVIEW indicator.
4	Select the display monitor for your presentation session. The primary monitor will be designated by a P .
Ņ	Present the screen in 2-bit gray scale for the lowest bandwidth consumption, 8-bit color for fast performance, 16-bit for a medium quality of image and performance, or 32-bit for the highest image resolution.
	Begin using annotations in your live presentation.
٩,	If permitted, grant control of your mouse and keyboard to an attendee. Only one attendee at a time can have control of your computer. You always maintain overriding control, and you can cancel the attendee's control at any time. An attendee using a mobile device cannot take control. You cannot transfer a presentation to another presenter.
	Remove attendees from the presentation without ending the presentation.
×	End the presentation altogether and close the presentation interface.

BeyondTrust

Annotations

If you have permission to use Annotations, this tool is also available during presentations, allowing you to highlight areas of the screen and draw attention to specific areas and items.

Once you have started using annotations, right-click anywhere in your presentation to select from the annotation tools. To turn off Annotations, select **No Tool** from the dropdown menu, or click **Esc.**

Tools available include free drawing, rectangle and circle shapes, erase, undo, delete, color (red/black/white) and line thickness (thin/medium/thick).

depository institution. It is not authorized to accept deposits or trust accounts and is not licensed or regulated by any state or federal banking authority.

Collaboration

Chat with Other Representatives

From the **Home** tab of the console, you can chat with other logged-in users. If you are a member of one or more teams, select whichever team you would like to chat with from the list of queues at the left of the **Home** tab. You can chat with all members of that team or chat with just one user.

When you go back to your personal queue or select **All Queues**, you will remain in the chat for the queue you just left.

Click the arrow icon at the top left of the sidebar to collapse the sliding sidebar. If the sidebar is collapsed, hover over the arrow by the hidden window to reveal it. Click the pin icon that replaces the arrow icon at the top left of the sidebar to re-pin the sliding sidebar.

When typing in English, misspelled words are underlined in red. Right-click to view spelling suggestions or to ignore that spelling for the current console login.

In the settings, you can choose if the team chat should include status messages, such as users logging in and out, or only chats sent between team members.

Share your Screen with Another Representative

If your administrator has enabled this permission, you can share your screen with another user without the receiving user having to join a session. This option is available even if you are not in a session.

From a team queue, select a user, and click **Show Screen**. If working with more than one monitor, you can select which one to share or which apps should visible to the other user. Once you have made your selection, the receiving user gets a notification with the option to accept or decline the invitation.

A **Show Screen** window appears, showing the name of the user that is now viewing your screen. This window contains a chat box and the options to stop screen sharing, grant the receiving user control, and select which monitor and which apps to share. You can stop sharing your screen but keep this window open, or you can close the sharing session completely. If you leave the **Show Screen** window open, you can restart sharing your screen.

(09:31:45) You said: I'm going to show you how to change your settings.

First, click on the File menu

Share a Session with Other Representatives

Invite another user to join a session by clicking the **Share** button in the session tools. By default, only teams to which you belong will be listed.

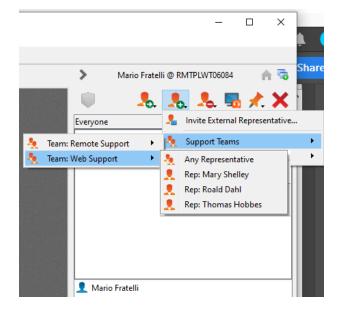

There are several ways you can invite a representative to join a session. You can use **Request Help** to route your request so that it is targeted at a specific support issue. Only issues that have been configured to allow you to request help are displayed on this list.

You can select a user listed in the teams displayed to invite them to join the session.

If you select **Any Representative**, the invitation is sent to the team queue so that any single representative in the selected team can join the session. You can send multiple invitations if you want more representatives from the team to join your session.

Users are listed here only if they are logged into the console or have extended availability enabled.

If you are permitted to share sessions with users who are not members of your teams, additional teams are displayed, provided that they contain at least one member logged in or with extended availability enabled.

When you invite a user with extended availability enabled, they receive an email notification.

If you have sent an invitation and it is still active, you may revoke the invitation by selecting it from the **Cancel Invitation** menu. Only the session owner can send invitations. Invitations do not time out as long as you remain the session owner. Multiple active invitations cannot exist for the same user to join the same session.

An invitation is made inactive when one of the following events occurs:

- The inviting user cancels the invitation
- · The inviting user leaves or transfers ownership of the session
- The session ends
- · The invited user accepts the invitation
- The invited user declines the invitation

When an additional user joins a shared session, they are able to see the entire chat history.

Use Extended Availability to Stay Accessible when Not Logged In

With extended availability, privileged users can receive email invitations to share sessions, even if they are not logged into the console. When sending an invitation, you may invite fellow team members. If permitted, you may also invite users from teams to which you do not belong. The ability to share sessions with users outside of your teams as well as to receive session invitations when logged out of the console extends your availability as a support representative.

If your account is configured for extended availability, you can enable or disable the functionality from the **Support** menu of the representative console.

If you have extended availability enabled, you see a notification when you log into the console. From this dialog, you can easily disable extended availability to avoid distraction while in a session, for example.

Note: If you choose to keep extended availability enabled, a license slot is reserved for you until such time as extended availability is disabled. This ensures that if you are invited to join a session, you are not denied login due to license usage restrictions

i	Extended availability mode is currently enabled. Do you wish to disable extended availability mode before continuing?				
		Yes	No		

Email Notification & Invitation

Each time you enable extended availability mode, the B Series Appliance notifies you via the email address configured for your user account, in the language you have specified, if available.

Note: BeyondTrust does not pull email addresses from external LDAP directory stores. The email address must be configured in BeyondTrust in one of two ways:

- An administrator can add an email address to a user account by going to /login > Users & Security > Users and editing the account.
- The user can set their own email address by going to the /login > My Account page.

The notification includes the URL of the site as well as a link to quickly disable extended availability mode.

The B Series Appliance also sends an email notification when you are invited to a session. This allows you to join a session even if you are not currently logged into the console. The email notification includes links to accept or decline the invitation, as well as to decline the invitation while disabling extended availability mode.

Invite an External Representative to Join a Session

Within a session, a user can request an external user to participate in a session one time only. The inviting user should click on the **Share Session** button and then select **Invite External Representative**.

A dialog opens asking the user to select a security profile. These profiles are created in the administrative interface and determine the level of permission the external user will have. When you select a profile, the full description displays below.

Enter the invited user's name. This name will appear to the customer and in reports. Next, enter comments about why this user has been invited. Click **Create Key**, and a new dialog containing the session key and direct URL will appear.

Select Policy:
Techcom Policy ~
Description:
This is for typical Tech Com users
Invitation Parameters: Representative's Name Tom Brady
Comments:
Create Key Cancel

Click the **Send** button to select how to send the session key to the external User. Depending on the options selected by your administrator, you may be able to send the invitation from your local email or from a server side email. You also can copy and paste the direct URL to the external user. The external user will need to download and run the representative console installer, which is an abbreviated process from the full representative console installation.

Rep Invite Session Key Generated	×

BeyondTrust

The invited user will have access only to the session tab and has a limited set of privileges. The invited user can never be the session owner. If the inviting representative leaves the session without another session owner, the external representative will be logged out. The session key for the invited user is valid for two hours or until the session ends.

You can invite more than one external user to a session. Be aware that each external representative allocates a BeyondTrust license.

Management

Manage Support Buttons

Support Buttons allow customers to initiate a support session to their assigned support team, enter a session key, or submit an issue to a support queue. Deployed Support Buttons can be managed from the Support Button management interface. Note that a mass-deployed Support Button installed in system-wide mode must be removed using Add/Remove Programs or system management tools.

F

Ξ

Access the Support Button management interface from:

- The Support menu of the representative console
- The **Support Buttons** button at the top of the representative console

The Support Button usage statistics include:

- Static fields:
 - **ID**
 - Customer Name
 - Computer Name
 - Deploy Date
 - Mass Deployed (Yes/No)
 - Deployed By (Representative Private Display Name)
 - Usage Count
 - Last Used Date (or Never if none yet)
 - Install Mode (User or System)
 - Icon Preview
- Dynamic (allowed to edit) fields:
 - Description
 - Profile
 - Deployed To (Queue)
 - Enabled (Yes/No)
 - Expiration
 - Public Portal

You can also **Edit** the dynamic fields, **Revoke** a Support Button, or **Export** the Support Button usage statistics to a *.csv file. If you revoke a massdeployed Support Button installed for all users of a system, the button may be removed only by using the system Add or Remove Programs control panel or systems management tools.

If you select **Edit** from the **Support Button Management Interface**, you can edit any of the dynamic fields. If multiple Support Buttons are selected to edit, **Multiple Values** is displayed in any dynamic fields that have different values.

Monitor Team Members in the Dashboard

The dashboard feature enables privileged users to view and monitor ongoing sessions, enabling administrative oversight to help manage staff. Based on roles assigned from the **Support Teams** page of the administrative interface, team leads can monitor team members of a given team, and team managers can monitor both team leads and team members of that team.

If a user is a team manager or team lead of one or more teams, the dashboard pane appears beneath the queue selection pane on the **Home** tab of the console. This pane displays any logged-in team members of a lower role for the selected team.

Status indicators show whether users are available to take sessions (green), are idle (gray), are busy (yellow), or have auto-assign turned off (red). If a user is in more than one state, their status color shows the most important information in order of auto-assign turned off, busy, idle, and available. Hover over the user's name to view full details. A bar at the bottom of the dashboard shows the percentage of users in each state. Hover over this bar to view the number or users with each status. Users cannot manually alter how their statuses are displayed.

Select a user from the dashboard pane to view any sessions they may be running. A team manager or team lead can take over a session from another user of that team by selecting the appropriate session from the queue and clicking the **Take Over** button. This transfers ownership of that session to the team manager or team lead, with the original user remaining in the session as a participant. A team manager or team lead can also transfer ownership of a support session from one user to another user or team.

It is also possible for a team manager to join a session in progress by clicking the **Join** button. The behavior is similar to joining a session via session invitation, except that no invitation is required.

Note: The team lead can join or take over a team member's session only if the team lead has start session access to the Jump Item that was used to create the session, or the dashboard setting to allow join or take over without start session access is checked.

Additionally, if configured in the */login* interface, a team manager or team lead can monitor team members of a lower role even if there are no ongoing sessions, as long as those users are logged into the console.

A monitoring icon can be displayed in the corner of the user's desktop to indicate that monitoring is taking place. When the user moves the cursor near this icon, it moves to another corner to prevent obscuring the screen. Select the user whose screen you wish to view and then click the **Monitor** button. This opens a new tab in your console, displaying either the user's entire computer screen or only the console, depending on the administrative settings.

To gain control of the user's computer, click the Enable Mouse/Keyboard Control button.

Within a team, a user can administrate only others with roles lower than their own.

Note: Roles apply strictly on a team-by-team basis so that a user may be able to administrate another user in one team but not be able to administrate that same user in another team.

Representative Survey

At the end of the session, you may be prompted to fill out a short survey regarding the session. Your administrator can fully customize the questions through the administrative interface and can review the results from the session reports. If one or more of the questions is required, you will not be allowed to close the session until you have answered those questions.

Your administrator may also choose to allow you access to the representative survey during a session. In this scenario, the survey can be used as a workflow template, allowing your administrator to push a series of questions and/or check mark points, as well as specific links you may use in your support session.

Representative Survey					
Please fill out the following survey.					
 1. Was the Customer's issue resolved? Yes No, will try again later No, impossible 					

depository institution. It is not authorized to accept deposits or trust accounts and is not licensed or regulated by any state or federal banking authority.

What Your Customer Sees: The BeyondTrust Customer Client

Customers on remote desktops, smartphones, and other devices interact with support reps primarily through the BeyondTrust customer client.

They may also see prompts and messages in the context of the public site or support portal. This section details the customer-facing elements of a BeyondTrust remote support session on a desktop or laptop.

For more information on supporting other devices, including <u>Apple iOS</u> and <u>Android</u>, please see https://www.beyondtrust.com/docs/remote-support/getting-started/index.htm.

Public Site: Request Support

The public site is the support portal for your B Series Appliance, where your customers go to request a support session or join a presentation. On this page, your customer can initiate a session by clicking a representative's name, submitting a session key, or filling out an **Issue Submission** form. Your customer can also join a presentation by clicking on a presentation link or submitting a session key.

Describe Your Issue

A customer can access the public support portal using the URL provided by a representative. If SAML authentication is configured and enabled for the public site, the customer is presented with the **Portal Login** window. The customer must click **Login** and then provide credentials to authenticate with the identity provider.

The customer is then taken to the support portal page where they can submit their request for support. The customer's name and any custom fields that are configured, such as email, are automatically populated and are not editable.

2	Jo			
				Send
«M	essages			Joind
« M	Everyone	Representatives	Notes	

If real-time chat translation is enabled, customers can chat with a representative in their own language. As an example, a customer whose main language is English can chat with a representative who speaks only Dutch, with the chat traffic being automatically translated in real time.

If the issue submission survey is enabled, your customer is asked to select either a representative name or a specific type of issue, depending upon the settings your administrator has configured. Your customer can also enter their name, company name, and a description of the problem. Your administrator optionally might include a **Company Code** field to help with issue tracking.

Based on the method of session initiation, your customer is placed either in the selected representative's support queue or in the support queue for the team assigned to handle the selected issue, or your customer joins the specified presentation.

For your Apple iOS device customers, your iOS-configured support portal is a secure repository of public and private profiles you uploaded in the *l*login interface. Private profiles are only accessible if the representative has generated an iOS access key.

If any customer notices are active for this site, they are displayed in the **Important Message** section. Notices can alert customers to broadly impacting IT outages for which no support may be needed at this time, thereby eliminating the need for the customer to join a support session unnecessarily.

If a schedule is set for this public site and the current time is outside of the scheduled business hours, session start methods other than session keys are removed from the site, and a portal closed message displays.

For more information, please see the following:

MODIFY SHARING

Customer Client: Support Session Interface

When your customer starts a support session with you, that session starts either as web-based chat (referred to as click-to-chat) or with the full customer client download, depending on your site settings. If you uploaded a photo avatar to be used with your account, the photo displays in the chat window when using the full customer client.

If starting a session as an HTML5 web-based chat, your customer is asked to allow notifications, enabling pop-up notifications to help make your communications with customers more efficient.

Your administrator can determine which messages your customer sees before the session begins. Among the messages that may be displayed are a customer agreement, requiring the customer to accept the terms of entering a support session; a prompt to allow or refuse session recordings; and a greeting, which may include the estimated wait time and the customer's position in queue.

If any customer notices are active, they may be displayed automatically or sent manually to the customer client, giving customers the chance to leave the session if they are experiencing a known issue described in the notice. Customers leaving the session in this manner are not taken to the Exit **Survey** page, since no service was actually provided by a representative.

A hold message may display periodically, reassuring the customer that they are still in queue and will be attended to shortly. This message may include the estimated wait time and the customer's position in queue.

 Yasmine sent a NUDGE, Yasmine 6:44 AM Hello, how may I help you? am having issues with my video card G Chat With Support - Profile 1 - Microsoft Edge https:// .com/chat/html/e2c8f4655a1ab7f03e8741424bcecd77 Technology Company 28 *(05:14:40) Please read the following important message(s): IMPORTANT! support to see if this problem is a result of this server issue Thank you for your patience! END CHAT

BeyondTrust

During the session, the customer can chat with you and can request to send files to your computer. Your customer also can change the font size of the chat display.

If you send a nudge, the customer client is given focus and jiggles, and an audible alert sounds. The chat display shows that a nudge was sent.

To immediately stop screen sharing and disable any permissions the representative might have had, click the **STOP SHARING** link on the right side of the banner at the top of the chat. The customer can also choose to close the session entirely by closing the chat window. This uninstalls the software from their machine.

Note: STOP SHARING appears when screen sharing is done without any restrictions. If you allow the customer to select which applications to choose, then **MODIFY SHARING** is displayed, allowing the customer to change or select which applications to share, or to stop sharing altogether, if so desired. In either case, the session can always be terminated by closing the chat window.

Additionally, depending on your site settings, a watermark may appear on your customer's screen while you are in a session. This applies only to Windows and macOS systems.

Note: Customers running Linux must mark the customer client download file as executable before they can install it.

Start a Web-based Session Using Click-to-Chat

BeyondTrust enables you to start web-based click-to-chat Remote Support sessions from a web browser.

To start a session with click-to-chat, your customer does not need to download the BeyondTrust customer client app. Instead, direct your customer to your public site. Your customer must use a modern browser supported by BeyondTrust.

For click-to-chat to be available, your administrator must have enabled the click-to-chat option for at least one of the session start methods available from your public site. Click-to-chat is enabled from **/login > Public Portals > Public Sites**.

Restricted Customer Interaction: Privacy Screen, Disable Remote Input

To expedite your support of a remote computer, you can avoid customer interference by disabling the remote user's mouse and keyboard input. The remote user will still be able to see the active desktop. While input is disabled, each remote monitor will display an orange border.

Should you need to work on the remote computer privately, you can enable a privacy screen so that the remote user or passersby cannot see what you are doing. Instead, a courtesy message will be displayed. Your customer can regain control at any time by pressing **Ctrl-Alt-Del**.

Restricted customer interaction is available only when supporting macOS or Windows computers. In Windows Vista and above, the customer client must be elevated. On Windows 8, privacy screen is not available, and the representative can only disable the mouse and keyboard.

This feature is enabled from the **Screen Sharing** tab of a support session in the representative console. For more information, please see "Screen Share with the Remote Customer for View and Control" on page 72.

SALES: www.beyondtrust.com/contact SUPPORT: www.beyondtrust.com/support DOCUMENTATION: www.beyondtrust.com/docs

123

Automatic Log On Credentials: Reboot and Reconnect

You can prompt your customer to enter a valid username and password which will allow you to reboot the remote computer and automatically log back into the system without having to know their credentials or requiring them to be present. Follow the steps below to use the automatic log on credentials feature:

*

Note: To perform this function, your administrator must have enabled the /login security option to Allow Reboot with Cached Login Credentials.

۲

Tip: Before you can use this feature, you must elevate the support session and start screen sharing.

BeyondTrust	t Remote Su	upport - Enter Credentials			
Your support representative has requested to configure your cor to log in automatically after a reboot. This operation requires you username and password. The automatic login functionality will be disabled after the support					
session has ended. Username: darsenault OK					
	Password:		Cancel		

Note: The credentials are stored by the OS and not by BeyondTrust. We leverage a secure function native to Windows to accomplish this functionality. At no time are the credentials exposed on the network in any form. This functionality is available for Windows OS only and cannot be performed on remote systems running a Mac OS.

- 1. Click on the Power Control Special Action from the menu.
- 2. Select Request Automatic Login Credentials.

- 4. Once done, the Power Control Special Actions menu text changes from **Request Automatic Login Credentials** to **Clear Automatic Login Credentials**.
- 5. Upon the next reboot, the system will log in with the credentials entered by the user.

SALES: www.beyondtrust.com/contact SUPPORT: www.beyondtrust.com/support DOCUMENTATION: www.beyondtrust.com/docs

Show My Screen: Reverse Screen Share

When you share your screen with your customer during a support session, your customer will be able to see either your entire desktop or only those applications you have chosen to present. You can continue chatting with your customer throughout.

To enlarge the screen viewing area, your customer can hide the side chat bar by clicking the show/hide arrow on the divider between the chat bar and the presentation window. If your customer receives a message while the chat bar is hidden, the show/hide arrow will flash orange.

Your customer can further manage the presentation display by choosing to view your screen at its actual size or scaled to fit in the client window. Your customer can also choose to view your screen at 8 bits for the fastest

performance, 16 bits for a medium quality of image and performance, or 32 bits for the highest image resolution. You can also choose to share mouse and keyboard control with your remote customer.

Note: The Linux customer client does not support control of the representative's screen.

Support Button: Quickly Request Support

If you have installed a Support Button on your customer's computer, that button will appear as a desktop or menu shortcut on their computer. If the Support Button has been customized, it will appear on your customer's computer with a custom image and title.

6

Clicking this button opens a dialog prompting your customer to start a session. If this button has been preconfigured to start a session with a specified representative or team, your customer can begin a session by clicking the **Connect** button.

Alternatively, your customer can enter a session key or describe their issue. When entering a session key, the customer will connect with whichever representative generated the key, regardless of whether the representative is associated with that Support Button or not.

Note: A Support Button cannot be deployed from a session that was started from a SAML authenticated public portal and a Support Button cannot be used to start a session with a public portal that requires SAML authentication.

If any customer notices are active for the public site this Support Button is associated with, those messages are displayed at the top. Notices can alert customers to broadly impacting IT outages for which no support may be needed at this time, thereby eliminating the need for the customer to join a support session.

Presentation Attendee Client: Join a Presentation

Note: The presentation feature must be enabled when your support site is built. If it is not available and you need to run presentations, please contact Support or your site administrator.

The presentation feature is being deprecated as of Remote Support 22.1 and is not included in new site deployments. For upgrades, it is turned ON, but you can opt to turn it OFF. If you have a new site deployment and you need to run presentations, please contact Support or your site administrator.

To join a presentation from a computer, your attendee connects immediately and seamlessly through a browser using HTML5. Your attendee can join a presentation through any of several methods.

Attendees can also join a presentation from an iOS or Android device. To do so, they must download the BeyondTrust presentation app. For details, see the BeyondTrust documentation for supporting the appropriate device.

Your administrator can determine which messages your attendee sees, if any, before the presentation begins. Messages that may be displayed include an attendee agreement and a greeting. Depending on the presentation state, your attendee may see a message that the presenter has stopped presenting, or that the presentation has ended and they may close the browser. If no one is available to give the presentation, an orphaned presentation message may also be displayed.

During a presentation, attendees can view your desktop or selected applications and can also chat with you alone, or with you and other attendees.

By clicking on the orange B icon, attendees can choose actions to perform from the tool bar. They can leave the session, view presentation details, go to fullscreen, change the screen size, and toggle the chat panel.

You can also choose to share mouse and keyboard control with attendees. The tool bar and chat panel locks in place when they have control. Only one attendee at a time can have control of your computer. You can always cancel the attendee's control at any time.

At the end of the presentation, attendees receives a message asking if they would like to leave the presentation.

Warning!
You are about to leave the presentation! Are you sure you want to do this?
LEAVE STAY

Ports and Firewalls

BeyondTrust solutions are designed to work transparently through firewalls, enabling a connection with any computer with internet connectivity, anywhere in the world. However, with certain highly secured networks, some configuration may be necessary.

TYPICAL NETWORK SETUP

- Ports 80 and 443 must be open for outbound TCP traffic on the remote system's and local user's firewalls. More ports may be available depending on your build. The diagram shows a typical network setup; more details can be found in the <u>BeyondTrust</u> Appliance B Series Hardware Installation Guide.
- Internet security software such as software firewalls must not block BeyondTrust executable files from downloading. Some
 examples of software firewalls include McAfee Security, Norton Security, and Zone Alarm. If you do have a software firewall, you
 may experience some connection issues. To avoid such issues, configure your firewall settings to allow the following executables,
 wherein {uid} is a unique identifier consisting of letter and numbers:
 - bomgar-scc-{uid}.exe
 - bomgar-scc.exe
 - bomgar-pac-{uid}.exe
 - bomgar-pac.exe

For assistance with your firewall configuration, please contact the manufacturer of your firewall software.

• Example firewall rules based on B Series Appliance location can be found at <u>www.beyondtrust.com/docs/remote-support/getting-</u>started/deployment/dmz/firewall-rules.htm.

If you should still have difficulty making a connection, contact BeyondTrust Technical Support at www.beyondtrust.com/support

Troubleshoot BeyondTrust Representative Console Connections

- 1. Make sure you are logged into the representative console.
- 2. If you have selected to use the representative list, make sure that your display name is visible on your public site. You can change this status from the **Support** menu or the system tray icon by selecting or deselecting **Showing on Representative List**.
- 3. Try following the initial steps of starting a BeyondTrust session on your own computer. Are you able to download the customer client?
- 4. Verify that the remote customer has internet connectivity. Is your customer able to get to your public site?
- 5. Lead your customer through the same steps you took when testing the customer client download in step 3 of this troubleshooter. Is your customer able to download the customer client?
- If the download does not initiate when your customer clicks on your name, enters a session key, or enters a support request, have the customer hold down the Ctrl key and press F5. This should clear the browser cache, ensuring that the customer is not attempting to download an expired version of the customer client.
- 7. If clearing the browser cache does not work and your customer is not prompted to save or run a file, the firewall your customer is behind may be blocking the download. Whitelisting the customer client executable in the firewall may be required.
- For more information, please see <u>Ports and Firewalls</u> in the Getting Started Guide at https://www.beyondtrust.com/docs/remote-support/documents/user/rs-admin.pdf.
- 8. Have your remote customer uninstall the BeyondTrust client, reboot their computer, and then run the executable file again.
- Make sure your remote customer has disabled any software firewalls that might be blocking outbound connections. Some examples of these include McAfee Security, Norton Security, and Zone Alarm. These firewalls will occasionally block outbound connections even after being disabled and may need to be uninstalled.
- 10. Alternately, your customer may have been prompted to allow or disallow/block the customer client when they ran the downloaded client. If the customer clicked **Disallow/Block**, have them open the internet security software on their computer and change the entry for **bomgar-scc.exe** to **Allow/Permit**. Have your customer go through the download process again but click **Save** rather than **Run**. Then have them run the executable again and click **Allow/Permit**. If the session still does not connect, have the customer run the saved executable again they should not be prompted the second time, and the session should connect.
- 11. Check if your customer is behind a proxy server. Ensure that your customer has correctly entered their credentials to permit the customer client to connect to you.
- 12. If following these steps fails to make a connection, contact BeyondTrust Technical Support at www.beyondtrust.com/support.

Licensing Restrictions

One BeyondTrust Remote Support license enables one support representative at a time to troubleshoot an unlimited number of remote computers, whether attended or unattended. Although multiple accounts may exist on the same license, two or more licenses (one per concurrent support representative) are required to enable multiple support representatives to troubleshoot simultaneously.

Tech Support

At BeyondTrust, we are committed to offering the highest quality service by ensuring that our customers have everything they need to operate with maximum productivity. Should you need any assistance, please log into the <u>Customer Portal</u> at https://beyondtrustcorp.service-now.com/csm to chat with Support.

Technical support is provided with annual purchase of our maintenance plan.
