

Privilege Management for Windows & Mac 21.2

New and Updated Features – April 13, 2021

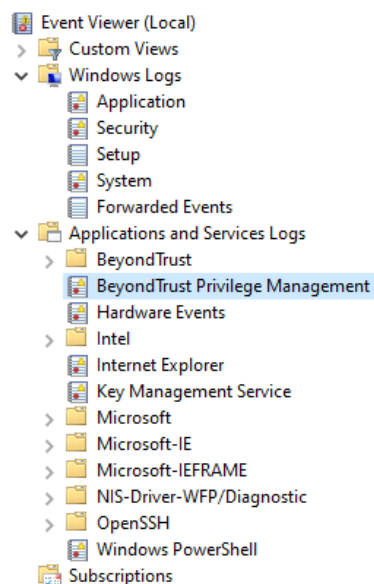

BeyondTrust Privilege Management for Windows & Mac (PMWM) is a preventative endpoint security solution that removes excessive admin rights, applies modern application control, enables passwordless administration, and gives users just enough privileges to do their jobs and be productive. Available on-premises or via SaaS, the solution blocks malware and ransomware and protects against both external and internal threats. Utilizing QuickStart policies, organizations receive rapid time-to-value whether deploying the solution on-premises or via SaaS.

Please see the [release notes](#) for additional details on these important enhancements.

New Feature Highlights – Privilege Management for Windows & Mac

Custom BeyondTrust Event Log

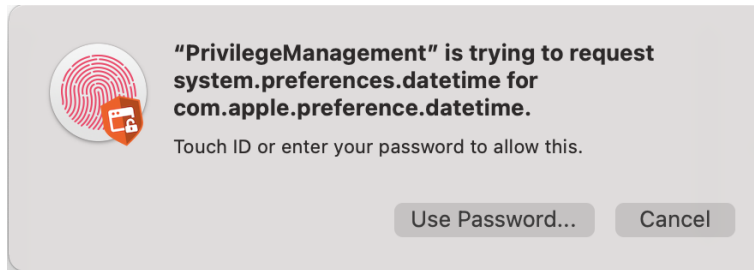

Privilege Management customers who rely on raising events to the local Windows event log can now log PM events to a dedicated BeyondTrust event location as an alternative, to avoid saturation of the Application event log.

TouchID Support for Mac

Organizations that want to provide end users with a seamless and familiar experience can now do so with the introduction of TouchID support in end user messages. When users are prompted to authenticate prior to running an application, they can now use their TouchID-enabled device instead of

a password to quickly authenticate themselves, as a faster and more convenient alternative to entering their password.

Offline Rotation of Passwords for PM Mac

For Mac endpoints under Password Safe management that are not connected to the corporate network, PM Mac introduces the ability to apply local account password rotations on behalf of Password Safe, via BeyondInsight. This use case helps organizations continue to manage credentials on endpoints for users that are working in remote locations.

Based on a configurable heartbeat, PM Mac checks in with Password Safe to check for any account passwords that require rotation, applies the change, and verifies that the change was successful.

The screenshot shows the BeyondInsight Managed Systems interface. It features a sidebar with navigation icons, a top header with the BeyondTrust logo and "Managed Systems" title, and a main content area. The main area includes a "MANAGED SYSTEMS" section with a "Smart Group Filter" set to "All Managed Systems" and a "Platform" dropdown set to "Mac OSX, Mac OSX Secur...". Below this is a table with 11 items.

Message Dropdowns for PM Mac

For organizations that require their users to provide justifications for 'why' certain applications are being used, this new feature lets users pick from a predefined list of reasons, as an alternative to typing out a reason. This not only gives users a more convenient way of submitting common reasons more quickly, but also helps administrators in analyzing reasons for using applications, with a consistent set of reasons to build reports from.

About BeyondTrust

BeyondTrust is the worldwide leader in Privileged Access Management (PAM), empowering organizations to secure and manage their entire universe of privileges. Our integrated products and platform offer the industry's most advanced PAM solution, enabling organizations to quickly shrink their attack surface across traditional, cloud, and hybrid environments.

The BeyondTrust Universal Privilege Management approach secures and protects privileges across passwords, endpoints, and access, giving organizations the visibility and control they need to reduce risk, achieve compliance, and boost operational performance. Our products enable the right level of privileges for just the time needed, creating a frictionless experience for users that enhances productivity.

With a heritage of innovation and a staunch commitment to customers, BeyondTrust solutions are easy to deploy, manage, and scale as businesses evolve. We are trusted by 20,000 customers, including 70 percent of the Fortune 500, and a global partner network. Learn more at www.beyondtrust.com.
