

Microsoft SQL

Question

What versions of Microsoft SQL Server are required for Privileged Identity?

Answer

All Privileged Identity Suite products with the ability to use a database are limited to using only Microsoft databases.

Production Environments

- MS SQL Server 2016
- MS SQL Server 2014
- MS SQL Server 2012
- MS SQL Server 2008 R2
- MS SQL Server 2008
- MS SQL Server 2005

Testing Environments

- Any of the systems listed above
- MS SQL Server 2016 Express
- MS SQL Server 2014 Express
- MS SQL Server 2012 Express
- MS SQL Server 2008 R2 Express
- MS SQL Server 2008 Express

The Privileged Identity Suite can use an existing installation of MS SQL Server. It does not require its own instance; however, it is recommended for it to have its own instance. Both 32-bit and 64-bit versions of the databases are supported.
