

# BeyondTrust Discovery Agent 23.1.2 Release Notes

June 29, 2023

## New Features and Enhancements:

- Switch to CLI mode when authenticating to a Junos device bash prompt.
- Improved Junos device enumeration with different account levels.
- Reduced the number of times the runtime options file is read and written in the log file.
- The remote agent is disabled if an I/O error is received.
- Removed logging of some well-known, non-error exceptions.
- Handles multiple path configurations for AuthorizedKeys.

## Issues Resolved:

- Resolved error in AIX user enumeration where number of returned users exceeded the configured max users.
- Resolved error where domain commands were not timing out or were timing out too early.
- Resolved an exception in parsing scheduled task data.
- Resolved error retrieving the AuthorizedKeys path in default Ubuntu.

## Known Issues:

- The installation dialogs have string substitution errors.
- Certain special characters in a MongoDB password cause the connection string to be improperly formatted and the connection fails. Workaround: For this release, avoid using special characters in the MongoDB password.

## Notes:

- Direct upgrades to this version are supported from versions 20.1.0 and later.
- This release is available by download from the BeyondTrust Client Portal at <https://beyondtrustcorp.service-now.com/csm>.
- There is a product dependency on having the .NET 6 Hosting package installed.
- The MD5 signature is: 4f535b119f28222c713bed247f7d413e
- The SHA-1 signature is: 6bdf8e421792a13ad870d7e579963eb01caa8b2
- The SHA256 signature is: bea0c0adee3579e998bae42b8a672e5232be6dd1e5ab91e0079bec086929e4c3
