Identity Security Insights 24.01 Release Notes

January 11, 2024

New Features and Enhancements:

- Customers can now define rules to filter out unwanted detections and recommendations from reports and dashboards. Once a rule is created, all existing and future instances that match the rule's criteria will be excluded from the UI (not deleted).
- Roles and permissions are now consolidated under general entitlements. Individual roles and permissions can be found in the Entitlements dashboard.
- On-premises Password Safe customers can now use Identity Security Insights to view passwords, accounts, secrets, and sessions across their enterprise.
  - The new Insights Collector handles both Microsoft Active Directory and on-premises Password Safe, and replaces the previous Microsoft Active Directory connector. Existing configured Microsoft Active Directory connectors will automatically update. You can re-run the installer to gather more on-premises Password Safe data.

Known Issues:

None.

Notes:

None.
