

BeyondInsight for Unix and Linux 9.1.0 Release Notes

August 1, 2019

New Features and Enhancements:

- Filtering options have been added to the Tasks page
- Filtering options have been added to the Policy Management and Audit pages
- Password Safe Integration improvements:
 - Domain accounts are only listed once, rather than per host
 - Managed accounts can be searched
- Role based policy features are now linked to policy versions
- File Integrity Monitoring policies can be cloned
- IO logs can be navigated by command history in Session Replay
- User experience improvements for Sudo and FIM policy assignments
- User interface and branding improvements

Issues Resolved:

- Resolved an issue with failed REST connections reporting as errors in the Host grid
- Resolved an issue with UVM appliance installations and upgrades
- Resolved an issue when automatically accepting SSH fingerprints in Discover
- Resolved an issue with the first run wizard database reset. Database state is now cleared.
- Resolved an issue with Active Directory Groups and policy
