

Privilege Management for Unix & Linux 10.2.0-09 Release Notes

December 9, 2019

Issues Resolved:

- Resolved an issue in which a user who was allowed to run a command in a role-based policy where the username was the same as the group name resulted in all users belonging to that group being able to run the same command.
- Resolved an issue where a command run in a role-based policy by allowed users only worked when the username was the same as the group name.

Notes:

- This patch replaces the following binary reporting version 10.2.0-09: **pbmasterd**.

Prerequisites:

- Installation of PMUL 10.2.0-08

Installation Instructions:

1. Log in as root.
2. Uncompress and untar the tar file:

```
uncompress pbul-<flavor>-10.2.0-09-upgrade.tar.Z  
tar xvf pbul-<flavor>-10.2.0-09-upgrade.tar
```

Note: Alternatively, you may use the **gunzip** command rather than **uncompress**.

3. As root, run **pbpatchinstall**.

This script will automatically replace the binaries affected by the new binaries in the tar file.
