

Privilege Management Cloud 21.6 Release Notes

August 19, 2021

New Features and Enhancements:

- User requests to run or perform an action can now be given a duration. This can be either:
 - **Once:** The client can perform the action one time and the user must re-request if they need to repeat the action.
 - **Duration:** The client can perform the action an unlimited number of times within the duration (for example, 1 hour, 1 day, 30 days). Once the duration expires the user must submit a new request.

Added a *pending* message, so that if a user attempts to perform the same action while they have an outstanding request, they are advised of its status.
- Privilege Management Cloud now offers the ability to auto-assign latest policy revision when assigned to groups.
- Privilege Management Cloud now offers the ability to promote previous policy revision to new current revision.
- Activity audit data can be exported as part of our current SIEM integration.
- Elastic Common Schema is now a supported format in SIEM integration.
- Added **Summary** field to the **Activity Auditing** page.

Components:

- PM Reporting: 21.1.61
- Web Policy Editor 21.6.126

Compatibility:

IMPORTANT!

Do not install a new adapter version before you are running a version of PM Cloud that supports it. Installing an unsupported adapter can result in endpoints that no longer connect. You will be notified before your instance of PM Cloud is upgraded.
