

Privilege Management Cloud 22.8 Release Notes

October 25, 2022

New Features and Enhancements:

Web Policy Editor

- Assigning the latest policy revision is now restricted to the computer groups available for a user, based on their permissions.
- **Add to Policy** displays only the policies the user has permissions to edit.

Privilege Management Reporting

- If a user does not have edit permissions for any policies, the **Add to Policy** button is not available.
- Users can now add an application to policy from a given event from the **Event Detail** page.
- Users no longer need to reload the **Events All** or **Process Detail** reports when closing an event detail.

PM Cloud

- Added role-based access to computers, computer groups, and policies.
- Added **month** as an approval time frame for authorization requests.

Issues Resolved:

Web Policy Editor

- Added **UUID Regenerate** page to **Utilities** within WPE to provide the option to resolve problem with inaccurate data displayed in Analytics, showing incorrect Workstyles or Application Groups.
- Resolved issue in which a list of computer groups on Assign Policy revision at check-in was empty after making a change to policy via **Add to Policy** in Analytics.

Privilege Management Reporting

- Performance improvements.
- **User Name** filter now applied accurately.
- Resolved issue in which clicking on the number of processes from **Discovery by Path** did not return the correct number of results when directed to **Events > All**.

PM Cloud

- Resolved issue in which sorting was not working for the **Language** column in the **Users** grid.
- Resolved issue in which timestamps in Analytics did not match timestamps in the AWS S3 bucket.
- Resolved issue in which the Default computer group was not automatically selected when a user manually authorized computers.
