

RED IM – ECM Plugin 18.1.1.99 Release Notes

March 5, 2018

New Features and Enhancements:

- Includes support for retrieval of credentials from Stored/Managed Password stores across Management Sets.
 - Windows Local Credentials.
 - Windows Domain Credentials.
 - Linux Credentials.
 - SQL Server Credentials.
 - Web Credentials – Managed in RED IM as Stored/Managed Credentials using a specific convention.
 - Global Shared Local Credentials for Windows, Linux, and SQL Server endpoints – Managed in RED IM as Shared credentials using a specific convention.
- Includes support for retrieval of credentials from Shared Password Lists.
- Concurrent password checkouts – Credentials can be retrieved and injected in Bomgar regardless of if they are currently checked out to another user in RED IM.
- Rotate passwords on session end – If enabled and configured in the plugin, Stored/Managed credentials configured to auto-spin in RED IM will have a spin job created by the integration when the session ends and the credential is checked in.

Notes:

- The RED IM – ECM Plugin is compatible with:
 - Remote Support 18.1.2
 - Privileged Access 18.1.2
 - Remote Support 17.1.5
 - Privileged Access 17.1.9.
- Requires Endpoint Credential Manager 1.2.0.1071 or higher.
