

Privileged Identity - ECM Plugin 19.3.1 Release Notes

April 7, 2020

Issues Resolved:

- Added a new configuration setting to allow admins to specify whether they want local stored credentials to match (only) the FQDN of the machine when domain is known. This work also uncovered and addressed a bug in 19.2.2 with the altered search query logic.

Notes:

- The Privileged Identity ECM Plugin is compatible with Privileged Identity 5.5.5.2+.
- The Privileged Identity ECM Plugin requires 20.1.1+ of the Secure Remote Access products.
