

## Privileged Identity 5.5.4.1 Release Notes

January 3, 2019

### New Features:

- Added a new Web Application and Web Service setting to allow remote access to checkout and respect password checkouts.
- Added new options to Zone Processors and Deferred Processors to ignore retry jobs and/or de-elevation job.

### Issues Resolved:

- Resolved an issue with the Disconnected Account Management service stopping.
- Resolved an issue with AppLauncher and Session Recording not starting correctly.
- Resolved an issue with Disconnected Account Management clients excessively logging.
- Resolved an issue where refreshing a CLR extension related to an Account Store would cause an installation window to appear.
- Resolved an issue where uploading a password file to the Web Service using the keyboard would not have the same results as when using the mouse.
- Resolved an issue with some jobs being unable to complete due to waiting on retry or de-elevation jobs.
- Resolved an issue with the impersonation to group ability.
- Resolved an issue with Disconnected Account Management not elevating properly.
- Resolved an issue with returning a false positive when attempting to manage a non-existent account name in Azure.
- Resolved an issue with various cloud extensions not refreshing correctly.
- Resolved an issue with retrieving personal passwords through the Web Service.
- Resolved an issue with whitespace not being handled appropriately in the search filters.
