

Privileged Identity 7.0.1 Release Notes

January 7, 2020

New Features and Enhancements:

- Added Approval context information for password requests to the **Requests** page.
- Linux elevation is now a native elevation type.
- Elevation jobs can now be edited while in the web application.
- Management Sets can now be viewed, added, and edited in the web application.
- Added **Password Comments** to the list display for shared credentials. The option to enable this is located on the **Session Settings** page.
- Added the ability to assign a ZoneID to an Event Sink.
- Added propagation for Azure Key Vault, HashiCorp Vault, and Amazon Secret Manager.
- Added the ability to **View** and **Unlock** accounts to the web application and web service.
- Added the ability to **Configure**, **List**, and **Delete Event Sinks** to the web application and web service.
- Added the ability to create Self-Account Elevation Delegations to the web application.
- Added the ability to **Edit**, **Add**, and **Delete Discovery and Propagation settings** to the web application and web service.
- Updated the translations for the web application.
- Added propagation support for Rapid7's InsightVM vulnerability management solution.
- New languages supported in this release:
 - Simplified Chinese
 - Traditional Chinese
 - Brazilian Portuguese
 - Spanish

Issues Resolved:

- Resolved an issue with Discovery and Propagation of Scheduled Tasks on Windows Server 2019.
- Resolved an issue with generating large snapshots or reports.
- Resolved an issue with errors being displayed when running queries against database versions that have not been validated. Now a warning is displayed with the option to allow the customer to continue.
- Resolved an issue with Personal Password Disclaimer messages not appearing in the web application.
- Resolved an issue with MFA alerts being sent twice.
- Resolved an issue with Shared Credential List entries not showing the password field in the Web Application if *Hide Passwords, allow only copy to clipboard* was set.
- Resolved an issue with how the web application handles personal passwords, shared passwords, and managed passwords when set to **Hide until shown**, **Hide with Clip Board access only**, and **Disable Clipboard access**.
- Resolved an issue with checking out a password and then checking that same password out to a Group.
- Resolved an issue with SMTP File Logging not creating the logfile if one doesn't exist.
- Resolved an issue with Password Change Jobs failing sometimes on CISCO devices.
- Resolved an issue with some upgrades failing due to auto-created database indexes.
- Resolved an issue with importing PuTTY keys if the PEM version of the key had already been imported.

- Resolved an issue with the canceling the Database setup page causing problems on the License setup page.
- Resolved an issue with Refresh and Discovery Jobs failing for CISCO devices under certain circumstances.
- Resolved an issue with the default port value for ViewDS instances.
- Resolved an issue with the ellipsis button on the **Password Change Job** window.
- Resolved an issue with filtering in Shared Credential Lists and the Windows Target page.
- Resolved an issue with propagations that run processes not displaying error messages.
- Resolved an issue with some logging being added to the database when it shouldn't.
- Resolved an issue with using a custom port for SSH Custom Account Store types.
- Resolved an issue with the tabbing order when filling out the **Customer Information** window in the installer.
- Resolved an issue with the **Customer Information** window in the installer not automatically filling in the information from the previous install when upgrading.
- Resolved an issue with not being able to limit the number of displayed accounts when using Custom Account Stores.
- Resolved an issue with launching some applications using shadow accounts.
- Resolved an issue with propagation of changed passwords to DCOM objects.

Notes:

- PI 7.0.1 exe installer SHA 256 checksum: a81f9d7ee8465de8b213daaca47199b843d69e28e6b1ba66a75303f9773b874b.
- Privileged Identity 7.0.0 supports upgrades from 5.5.4.4, 5.5.5.x, and 6.0.x
- PI 7.0.1 supports BeyondTrust PI ECM Plugin 19.4.2
