Privileged Identity 7.3.2 Release Notes

May 25, 2023

New Features and Enhancements:

- Added a web activity log panel in the Privilege Identities' Web UI.
- Updated PI prerequisite checker to test .NET Core 6.
- Improved the File Store feature to allow for logging to the system's event logs when the option is enabled.
- Added an event sink option for File Store check-outs/check-ins.
- Added a feature in the **Web Application Global Delegation Permissions** to limit the number of displayed identities as well as filter for Identity names.
- Added new logging to track account mask activities.
- Added a paging attribute sort feature to the LDAP configuration.
- Improved the disconnected account management Python script's function to be more in line with the Windows client.
- Added an option to hide the ability to share personal passwords.

Issues Resolved:

- Resolved an issue in which the disconnected accounts permissions were not set properly for low-powered users.
- Resolved an issue in which the pull-down menu for the File Store Identity Name List did not display all of the identities defined.
- Resolved an issue in which an entry in the shared credentials list for account name included a back slash, preventing the password activity to be displayed for the account.
- Resolved an issue in which the Web UI File Store feature did not allow users to extend checkouts.
- Resolved an issue where **Signed in as** and **Management Set** options under **Job details** were not sizing the fields and displaying contents correctly.
- Resolved an issue where the **Job Details Log** tab was not loading in the PI web console.
- Changed the behavior in which a password change job would overwrite the job description if input parameters are not set to never overwrite.

Notes:

- PI 7.3.2 exe installer Checksum (SHA256): ca441adb9f8392fa7ebe94a3ffa704cc8e969c8b01da957155509e192a0e639e.
