

Privileged Access Management 15.2.2 Release Notes

September 29, 2015

Requirements:

- This version of Bomgar has been certified for the Virtual and Physical Bomgar Appliance (B300P).
- Both Physical and Virtual Appliances require Base software 4.3.0 or later before installing Bomgar PAM 15.2.2.

Issues Resolved:

Access Console

- Resolved an issue where running multiple Shell Jump instances at the same time disabled Command Shell.
- Resolved an issue with White Listing on Windows 8+, where opening a non-whitelisted Windows Store Application caused the user to lose control of the remote system.

Security Providers

- Resolved an issue where removing one Policy Member from a Group Policy disabled the Remove button.

Mobile Devices

- Resolved an issue with Access Invite sessions not starting Screen Sharing properly on mobile devices.

Known Issues:

- None

Notes:

- Requires API version 1.13.0.
- Requires Integration Client 1.4.1+.
