

Privileged Access 17.1.4 Release Notes

August 1, 2017

Requirements:

- This version of Bomgar has been certified for the physical Bomgar Appliances (B200P & B300P), virtual Bomgar Appliances (VMware & Hyper-V), and cloud deployment models.
- This release requires Base software 5.0.0 or later.

New Features and Enhancements:

- Languages are now supported for PA 17.1.
 - Dutch
 - French
 - German
 - Italian
 - Japanese

Issues Resolved:

- New failover syncs are no longer started if a failover sync is already in progress.
- The screen sharing window now has keyboard focus after screen sharing starts.
- Resolved an issue with entries being incorrectly deleted from group policies when a Jump Group was deleted.
- Resolved an issue with session recording timestamps being in the wrong order, causing the recording to appear to terminate prematurely. Session recordings no longer contain out-of-order timestamps, and the converter process is now tolerant of out-of-order timestamp, allowing older recordings with disordered timestamps to be viewed.
- Resolved an issue with credential providers sometimes causing host systems to hang at the Windows logon screen after installing or upgrading 17.1.x Jump Clients.

Known Issues:

- None.

Notes:

- Supports upgrades from PA 16.1.1+. If on a version prior to this, multiple upgrades will be required.
- Requires API version 1.16.0.
- Requires Integration Client 1.6.3.1054.
- Requires Endpoint Credential Manager 1.2.0.1071.
- Certified with the following Bomgar Mobile versions:
 - [iOS Access Console 2.2.3+](#)
 - [Android Access Console 2.2.4+](#)
 - [Android Unattended Access Client 2.2.0+](#)
- NOTE: The above mobile apps require a trusted CA-signed certificate on the appliance.
