

Privileged Remote Access 19.2.2 Release Notes

November 5, 2019

New Features:

- Support for macOS 10.15 (Catalina).

Issues Resolved:

- Resolved an issue where Jump Clients would not upgrade and install in older Linux distros.
- Resolved an issue where a pre-defined domain field is blank when attempting an RDP Jump Method.
- AD users are now able to change Email address in My Accounts.
- Resolved an error when editing LDAP providers.
- Resolved a Vault issue where domain password rotation fails.
- Resolved an issue where Public Display Name caused SAML Authentication to fail.
- Resolved an issue where key injection failed to pass through Linux Jump Client session.
- Cloud customers are now able to change SMTP port to different settings in Email Configuration.
