

Base 3.3.2 Release Notes

July 16, 2012

Requirements:

- Base version 3.3.2 is certified for all physical appliances.

New Features and Enhancements:

- Manual updates - customers with non-internet-facing appliances can now generate their own download key to check for updates from update.bomgar.com.
- The certificate management interface has been streamlined to fit entirely on one page, providing a simple top-down workflow for appliance administrators.
- Updated the telnet interface and added additional configuration options.

Issues Resolved:

- Resolved an issue where redirects from HTTP to HTTPS were not working properly when network restrictions were also configured.
- Resolved an issue with alternate HTTP ports not working correctly.
- Resolved an issue with being able to save a blank hostname, which will now be saved as "localhost".
- Resolved an issue with an appliance login page error if the login page was left idle for an extended period of time.

Notes:

- The Service Patch version has been incremented to 15.
