

## Base 4.1.0 Release Notes

October 21, 2014

### Requirements:

- This maintenance release base version 4.1.0 is certified for the physical and virtual appliance.

### New Features and Enhancements:

- Port 8200 is no longer the default port for new appliances and has been removed from the factory default settings for all appliances.
- Support for a 3rd disk has been added to Virtual Appliances for Session Recordings. After the disk has been added, information for the 3rd disk will now show on the Storage page.

### Issues Resolved:

- The username and display name fields in /appliance are now limited to 64 characters.
- Resolved an issue when logging into /login with long Kerberos credentials.
- No longer accepting the same port for both HTTP and HTTPS.
