

# Integration Client 24.1.1 Release Notes

April 23, 2024

## New Features and Enhancements:

- Added and improved logging, including new logging in the Metrics Plugin, to aid debugging issues with specific sessions.
- Added a new setting to allow batching of error emails in the event that a customer experiences a large number of errors within a short time.

## Issues Resolved

- Removed the FLV format for session recordings. Existing configurations will automatically swap to M4V to avoid failures.
- Addressed a timing issue in which some sessions could get skipped when multiple schedules are in use and the session falls within a narrow window between the scheduled run time and when the process actually runs.

## Notes:

- Supports upgrades from any prior release.
- Certified for GA.
- Integration Client 24.1.1 is compatible with 19.1 and later versions of the Secure Remote Access products.
- Metrics-DB Plugin 24.1.1 is certified to work with Integration Client 24.1.1.
