

# BeyondTrust Appliance U-Series Software 3.3 Release Notes

August 10, 2021

## New Features and Enhancements:

- Added additional Configuration Wizard Questions.
- Added an Appliance Key / Marketplace Appliance Bit in BeyondInsight.
- Removed references and functionality within the Appliance Management applications that interfaced with Enterprise Update Server (EUS). 2012 and 2016 OS appliances updating to U-Series Software 3.3 version that still have EUS installed will no longer be able to update the username and password for the EUS admin account, nor update SMTP or proxy settings. New 2016 appliances ship without EUS.
- BeyondTrust Network Security Scanner (Retina) has been replaced with BeyondTrust Discovery Agent.
- Added SSL support for SMTP in Maintenance.
- Rebranded UVM to BeyondTrust Appliance U-Series.
- Added BeyondInsight low-privilege SQL user support.
- Made adjustments to service names.
- Added KMS server support for well-known volume license keys.
- Added BeyondTrust Anti-Malware (BAM) notifications to the notifications area in the Web UI.
- Added Support for BeyondTrust Anti-Malware (BAM) agent .
- Removed the Roles Templates feature from the Roles Editor UI.

## Issues Resolved:

- Resolved issue in which the backup service could not correctly process a large number of session monitoring files.
- Resolved issue in which the **Maintenance > View Update History** page displayed incorrect information.
- Resolved missing service errors in **UVM\_Interface.log**.
- Resolved issue in which backups failed when the remote database connection string contained the word *local*.
- Resolved issue in which Queue File Synchronization did not work on **High Availability** page.
- Resolved issue in 2020-R1 and 2020-R2 images in which SQL Analysis Server permissions were missing, causing backups to fail when Analysis/Reporting roles were turned on.
- Resolved issue in which deleted BeyondInsight users were still presented as selectable users in notifications (including disabled, locked, and quarantined accounts).
- Resolved issue with the licensing monitor in which it would check for drive encryption on virtual images when it should have only done so on hardware.
- Resolved an issue in which Analytics & Reporting failed if it ran for more than 10 minutes.

## Notes:

- This update is available via the BeyondTrust Updater or as a manual installer from the download tool.
- .NET Core 3.1.14 or later is required.
