

# BeyondTrust Appliance U-Series Software 4.0.2 Release Notes

December 8, 2022

## New Features and Enhancements:

- Added support for Microsoft Windows Server 2022 and Microsoft SQL Server 2019.

## Issues Resolved:

- Updated headers on appliance management sites.
- Proper management software version now displayed on footer.
- Resolved issue when setting static IP during deployment.
- Resolved issue in which some U-Series Appliance binaries were not digitally signed.
- Resolved issue in which the Deployment Wizard on a 2022-R6 SQL-Free appliance image produced an internal 499 error: *SQL Expiration days left*.
- Resolved issue on the **Config IP** page in which the **Next** button was enabled before the user had entered valid adapter settings, or had clicked the **Save Adapter** button.
- Resolved issue in the Configuration Wizard in which an error was encountered while preparing the local BeyondInsight database.

## Known Issues:

- Some services might be slow to start on Server 2012 systems, which can impact deployment or configuration wizards.

## Notes:

- This update is available via the BT Updater or as a manual installer from the download tool.
- .NET Core 3.1.22 or later and is required (available through BT Updater).
- .NET 6.0.4 or later is required (available through BT Updater).
- SUPI 3.2 is required (available through BT Updater)
- The Deployment and Configuration Wizard is dependent on BeyondInsight 21.2.
