

# Security Package Update Installer 3.0.4 Release Notes

January 21, 2021

## New Features and Enhancements:

- Improved handling of response to failed packages.
- Resolved issue in which aborted package install could trigger reboots on resuming.

## Known Issues:

- SUPI Service API allows creating duplicate schedules which breaks processing (not UI).

## Notes:

- The desktop **SUPI.EXE** no longer has a user interface but can still be used at the command prompt to support scripting.
- SUPI 3.0.x is a prerequisite to installing UVM Software 3.2.2 and later.
