

UVM Security Management Appliance Software 3.2.2 Release Notes

September 3, 2020

New Features and Enhancements:

- Improved the security update installation workflow with new screens.
- Added support for the new SUPI 3.0 Engine. Added screens for package details and history.
- You can now schedule the installation of SUPI packages.
- The PBW role now retains role settings set by the user and does not overwrite them with policy settings.
- Improved communication between BTUpdater and the UVM Software.
- Added support for BeyondInsight 7.0 database calls.

Known Issues:

- Attempting **UPLOAD CRYPTO KEY OPTIONS** fails with *ERROR: Could not find a part of the path.*
- Product versions do not display on the LCD Panel.
- High Availability setup does not work if user has custom SSL certs in the UVM certificates store.
- When performing a backup with a remote BeyondInsight database and a local Auditing & Reporting database, there could be an invalid login attempt for SA user looking for **BeyondInsightReporting** on the remote db.
- When invalid dates are used to schedule a SUPI update, some of the pop-up messages returned are not in a user-friendly format.
- Warning card when not subscribed to SUPI subscriptions is not displayed in a warning banner.
- The **Schedule Update** card is displaying a radio button of an incorrect size and alignment.
- Odd highlighting can occur when UI items receive focus.
- A SUPI 3.0 radio button and accompanying text are not aligned properly in the GUI.
- A Date Time picker cannot be disabled in the GUI.
- When running a repair on UVM Software, an error is displayed: *The specified account already exists.*
- When uninstalling, UVM Software Services are not completely removed or not removed at all.
- On the SUPI Updates page, the second failed package is missing failed icon.
- On the SUPI Updates page, any error message past two lines is aligned incorrectly.
- **Update Package Name** is aligned incorrectly on the Update History page.
- **UVM Time** on the **Schedule a Reboot** page shows users the time but not the UVM time.

Notes:

- The Standalone Roles Editor Installer will remain at version 3.2.1 as there were no related changes in 3.2.2.
